LAUREL CONRAD

Indiana University Catalog New York : National Bureau of Economic Research

This book proposes, from a civil perspective —such as that developed by Stefano Zamagni— and a cordial perspective —such as that developed by Adela Cortina—, orientations to design an economy in tune with what the historical moment demands. Among other things, this comes from encouraging institutions, organisations and companies to include in their designs aspects as important for carrying out their activities as cordial reciprocity, mutual recognition of the communicative and affective capacities of the linked or linkable parties, public commitment and the active participation of civil society. The book first shows the conceptualisation of the process of self-interest as operating for one's own benefit and its inclusion in the orthodox economic model. In Chapter 2 it then displays some of the logical/formal and experimental limits of the axiomatic economics model to discover the possibility of building bridges between theoretical modelling and factual validation. Chapter 3 demonstrates the fragility of a rationality model based on the paradigmatic figure of homo oeconomicus. Chapter 4 reflects on the critical process that has identified reciprocity as a determining factor for human cooperation, turning this behaviour into a paradox in which the lack of a reasonable explanation from the selfish perspective becomes inconsistent in the predominant economic theory. Chapter 5 is from a moral point of view it describes and criticises the different approaches to reciprocity observed by sociologists, biologists, psychologists and economists. Chapter 6 analyses three mutual recognition proposals as possible foundations for human cooperation, highlighting one of them —cordial recognition, developed by Cortina— because it is more closely related to studies of reciprocity, particularly the most recent contributions from the neurosciences. Chapter 7 proposes cordial reciprocity as a horizon of meaning for the various approaches to reciprocity observed. Chapter 8 explores the possible emergence and development of cordial goods, a type of relational and communicative good that enables joint actions to take place in different contexts of human activity. Chapter 9 analyses the application and implementation of cordial reciprocity at the macro, meso and micro levels of the economy. And finally, it proposes guidelines for designing a monitoring and compliance system which, based on the communication, storage and processing of big data and the committed participation of stakeholders, offers businesses the possibility of inspecting their underlying dimensions of morality, emotions and responsibility.

A Bubble that Broke the World Routledge

This book provides comprehensive economic analyses on the paths to net-zero for China. It gives a detailed overview of issues and challenges related to carbon neutrality of the global largest emitter which have not been adequately addressed e.g., reduction costs and efficiency of existing actions, the multiple impacts of the newly established carbon market, and the potentials and costs of nature-based solutions such as biophysical sequestration, etc. Studies on China's carbon reduction have attracted scientists and policymakers from diverse backgrounds. Pursuing a holistic and systematic approach, the book establishes a fundamental framework for this topic, emphasizing the importance of integrated technical-economic-policy analysis. This book will not only be an essential reference to the carbon-neutral progress in China but also will be an outstanding text book on carbon-neutral management. Similarly, this book is expected to attract a great range of readership including undergraduate and postgraduate students, economic and climate specialists, researchers and policymakers in China as well as in overseas.

Economics and Elections Greenwood Publishing Group

This Modern Guide provides detailed theoretical and empirical insights into key areas of research in food economics. It takes a forward-looking perspective on how different actors in the food system shape the sustainability of food production, distribution, and consumption, as well as on major challenges to efficient and inclusive food systems.

Chemical Engineering Economics Springer

Humanity and Nature in Economic Thought: Searching for the Organic Origins of the Economy argues that organic elements seen as incompatible with rational homo oeconomicus have been left out of, or downplayed in, mainstream histories of economic thought. The chapters show that organic aspects (that is, aspects related to sensitive, cognitive or social human qualities) were present in the economic ideas of a wide range of important thinkers including Hume, Smith, Malthus, Mill, Marshall, Keynes,

Hayek and the Polanyi brothers. Moreover, the contributors to this thought-provoking volume reveal in turn that these aspects were crucial to how these key figures thought about the economy. This stimulating collection of essays will be of interest to advanced students and scholars of the history of economic thought, economic philosophy, heterodox economics, moral philosophy and intellectual history.

The Routledge Handbook of Agricultural Economics Routledge

This Pivot book provides a framework for understanding the economic and potentially unequal effects of pandemics, focusing closely on the Spanish Flu. It provides an in-depth analysis of the different effects of the Spanish Flu on the economy from unequal mortality to wages, housing and output. There is a general review of the literature but an important feature of this book is that it explains results using data from Spain, an ideal country to perform this exercise, as its mortality data is not affected by the First World War. Spain was also developed enough to have reliable data, but it was very heterogeneous across regions which will allow a comparison of more and less developed regions. No other book exists that offers a comprehensive and data-driven view of the effects of the Spanish Flu, which is the closest pandemic example to Covid-19. With the outbreak of Covid-19 increasing the need to learn about the economic effects of pandemics, this book will be of interest to academics and students of economic history, macroeconomics (economic crises) and economic development, as well being accessible for the general reader.

Distinguished Women Economists Cambridge University Press

This highly illuminating book marks a significant stage in our growing understanding of how the development of national traditions of economic thought has been affected by both internal and external factors. The expert contributors set an explicit agenda for the study of the dissemination of economic ideas across four centuries, acknowledging that the history of dissemination is also a history of the flux of economic beliefs, rendering any generalisation difficult, if not impossible. Topics explored include systems of political economy, European and American interactions, the diffusion of economic ideas in South-Eastern Europe and beyond, and the exchange of ideas between Japan and the rest of the world. This book will prove a fascinating and stimulating read for scholars and researchers in the field of economics generally, and more specifically in heterodox economics, the history of economic thought and economic theory.

The Driver Ludwig von Mises Institute

"Written by engineers for engineers (with over 150 International Editorial Advisory Board members), this highly lauded resource provides up-to-the-minute information on the chemical processes, methods, practices, products, and standards in the chemical, and related, industries."

The Political Economy of Regionalism Ludwig von Mises Institute

'International Handbook on the Economics of Integration edited by Miroslav Jovanovi? provides timely and rich academic contributions to considerations of the widest array of integration-related issues. European integration has been providing an inspiration to a number of academics and researchers. the Handbook is a recognition of the dynamic and strong solidarity of European integration. At the same time, the European Union often provided an example for integration schemes throughout the world which spread enormously since the mid-1990s. Leading experts from all continents contributed to this Handbook which will be a valuable input into academic and policy-making discussions and actions.' - José Manuel Barroso, President of the European Commission

The Social and Economic Roots of the Scientific Revolution

Springer Nature

The texts of Boris Hessen and Henryk Grossmann assembled in this volume are important contributions to the historiography of the Scientific Revolution and to the methodology of the historiography of science. They are of course also historical documents, not only testifying to Marxist discourse of the time but also illustrating typical European fates in the first half of the twentieth century. Hessen was born a Jewish subject of the Russian Czar in the Ukraine, participated in the October Revolution and was executed in the Soviet Union at the beginning of the purges. Grossmann was born a Jewish subject of the Austro-Hungarian Kaiser in Poland and served as an Austrian officer in the First World War; afterwards he was forced to return to Poland and then because of his revolutionary political activities to emigrate to Germany; with the rise to power of the Nazis he had to flee to France and then America while his family, which remained in Europe, perished in Nazi concentration camps. Our own acquaintance with the work of these two authors is also indebted to historical context (under

incomparably more fortunate circumstances): the revival of Marxist scholarship in Europe in the wake of the student movement and the professionalization of history of science on the Continent. We hope that under the again very different conditions of the early twenty-first century these texts will contribute to the further development of a philosophically informed socio-historical approach to the study of science.

Handbook on the Economics of Disasters Edward Elgar Publishing

Evaluating the myriad dimensions of how disasters can affect economic activity and decision-making, this cutting-edge Handbook presents a timely analysis of the conditions that reduce or exacerbate disaster impacts. Addressing developments in research on disaster economics, internationally recognized scholars combine theoretical considerations with empirical methods to expand and improve the field of disaster mitigation.

Labour Relations and Economic Performance CRC Press

This volume is dedicated to Horst Todt who celebrated his seventieth anniversary on March 14, 2000. All the contributors know Horst Todt personally and (with the exception of two younger co-authors) have accompanied his scientific career for several years, some as his assistants, some as his colleagues at the Frankfurt or Hamburg University, some as fellow members in scientific societies. All who know him acknowledge inspiring conversations on a broad field of issues often reaching far beyond the scope of economics. Being friendly and entertaining and without exaggerated personal ambition he often initiated work which others completed. In particular the two editors of this volume experienced and enjoyed the stimulating atmosphere at his Chair of Economics at the Hamburg University. We like to remember these scientifically and personally fruitful years under the tutorship of Horst Todt. The editors would like to thank the contributors to this volume for their readiness to cooperate and for the promptness of their delivery.

A Modern Guide to Food Economics Edward Elgar Publishing

Exploring regionalism from a political economic perspective, this text investigates why regional arrangements are formed, the conditions under which these arrangements solidify, and why they take on different institutional forms.

Advances in Behavioral Economics Edward Elgar Publishing

From the author of *Bowling Alone* and *Our Kids*, a "sweeping yet remarkably accessible" (*The Wall Street Journal*) analysis that "offers superb, often counterintuitive insights" (*The New York Times*) to demonstrate how we have gone from an individualistic "I" society to a more communitarian "We" society and then back again, and how we can learn from that experience to become a stronger more unified nation. Deep and accelerating inequality; unprecedented political polarization; vitriolic public discourse; a fraying social fabric; public and private narcissism—Americans today seem to agree on only one thing: This is the worst of times. But we've been here before. During the Gilded Age of the late 1800s, America was highly individualistic, starkly unequal, fiercely polarized, and deeply fragmented, just as it is today. However as the twentieth century opened, America became—slowly, unevenly, but steadily—more egalitarian, more cooperative, more generous; a society on the upswing, more focused on our responsibilities to one another and less focused on our narrower self-interest. Sometime during the 1960s, however, these trends reversed, leaving us in today's disarray. In a "magnificent and visionary book" (*The New Republic*) drawing on his inimitable combination of statistical analysis and storytelling, Robert Putnam analyzes a remarkable confluence of trends that brought us from an "I" society to a "We" society and then back again. He draws on inspiring lessons for our time from an earlier era, when a dedicated group of reformers righted the ship, putting us on a path to becoming a society once again based on community. This is Putnam's most "remarkable" (*Science*) work yet, a fitting capstone to a brilliant career.

The American Story Springer

This Handbook offers an up-to-date collection of research on agricultural economics. Drawing together scholarship from experts at the top of their profession and from around the world, this collection provides new insights into the area of agricultural economics. The Routledge Handbook of Agricultural Economics explores a broad variety of topics including welfare economics, econometrics, agribusiness, and consumer economics. This wide range reflects the way in which agricultural economics encompasses a large sector of any economy, and the chapters present both an introduction to the subjects as well as the methodology, statistical background, and operations research techniques needed to solve practical economic problems. In addition, food economics is given a special focus in the Handbook due to the recent emphasis on health and feeding the world

population a quality diet. Furthermore, through examining these diverse topics, the authors seek to provide some indication of the direction of research in these areas and where future research endeavors may be productive. Acting as a comprehensive, up-to-date, and definitive work of reference, this Handbook will be of use to researchers, faculty, and graduate students looking to deepen their understanding of agricultural economics, agribusiness, and applied economics, and the interrelationship of those areas.

The Dissemination of Economic Ideas Ludwig von Mises Institute

least, the author wishes to thank his constantly helpful wife Maggie and his secretary Pat Weimer; the former for her patience, encouragement, and for acting as a sounding-board, and the latter who toiled endlessly, cheerfully, and most competently on the book's preparation. Pandemics, Economics and Inequality Ludwig von Mises Institute

The Judicial Politics of Economic Integration analyses development strategies and regional integration in the Andean Community (the former Andean Pact), focusing on the establishment of the Andean Court of Justice and its case law, as well as the intellectual underpinnings that made such an impressive reform possible. The court is a transplant taken from the European integration process, and it materializes the visions, expectations, and dreams of the transnational development movement of "integration through law". The book discusses the outcomes of the Court in light of the debates about judicial reform in the process of development and regional integration. Although clearly confirming several earlier claims that "one size does not fit all", Osvaldo Saldias provides new insights into how legal transplants adapt and evolve, and how we can learn much more about legal reform from a project that presumably failed than from successful copies. The Andean Court of Justice is a remarkable example of an institution capable of adapting to

political and economic challenges; therefore, in times of a severe European economic crisis we should not forget that we might improve our understanding of European integration by looking at developments in other regions. An interesting new study with an international focus, this book will be a fascinating read for students and scholars of Law and Latin American Studies. **Partisan Politics in the Global Economy** Simon and Schuster Includes University catalogues, President's report, Financial report, registers, announcement material, etc.

European Demography and Economic Growth University of Michigan Press

This book draws on the expertise of both North American and European specialists of regional economics, evaluating the impact of economic policy in certain regions and considering alternative policies to foster regional economic development and improve the employment and income of the residents of these regions. Martinez-Vazquez and Vaillancourt have gathered chapters from a renowned international pool of experts, arguing for the importance of human capital in the regional economics process. The first section of the book examines the policy tools and process relevant to regional development, presenting evidence on both the American and Irish experience. The second focuses on the empirical evidence on the impact of taxes and public spending in Canada and the USA. The third examines methodological issues, looking particularly at Spain and Poland. **Chemical Engineering Economics** Columbia University Press First published in 1979, **European Demography and Economic Growth** presents a collection of essays on the demographic development of individual European economies like Austria, Hungary, Germany, France, Italy, Norway, Portugal etc. It provides a comparative analysis to clarify many crucial issues connected with the growth in European population from mid-eighteenth century. It looks at the suitable criteria for assessing the applicability of general theory to the experience of individual nations. It showcases the over-riding contrast between substantial economic variations on a national and regional level and the existence of common underlying demographic trends. This book will be useful for scholars and researchers of economic history, political economy, European history, population geography and economics in general.
