Decisions of the Federal Labor Relations Authority Government Printing Office This book provides a detailed account of transnational practices undertaken by Indian 'high-tech' workers living in the United States. It describes the complexities and challenges of adapting to a new culture while clinging to tradition. Asian-Indians represent a significant part of the professional and 'high-tech' workforce in the United States, and the majority are temporary workers, working on contractual jobs (H1-B and L1 work visa category). Further, it is not unusual for Indian immigrant workers to marry and have children while working in the U.S. Gradually, they learn to negotiate the U.S. cultural terrain in both their place of work and at home in the U.S. As such there is the potential that they will

become transnational, developing new identities and engaging in cultural and social practices from two different nations: India and the U.S. Against this background, the book describes the nature and extent of transnational practices adopted by high-tech Indian workers employed in the United States on temporary work visas. The study reveals that the temporary stay of these professionals and their families in the U.S. necessitates day-to-day balancing of two cultures in terms of food, clothing, recreation, and daily activities, creating a transnational lifestyle for these young professionals. Transnational activities at the workplace, which are forced by the work culture of the MNCs that employ them, can be considered as 'transnationalism from above.' Simultaneously, being bi-lingual at home, cooking and eating Indian and Western food, socializing with Indian and American friends outside work, and all the cultural activities they perform on a day-to-day basis, indicates 'transnationalism from below'. The book is of interest to researchers and academics working on issues relating to culture, social change, migration and development.

From the AuthorGlad to present the latest edition of this BA interview questions and answers book, which is much bigger than the previous edition and has more questions with improved answers and illustrations (wherever needed). This book is written to enable business analysts to succeed in the job interviews. This book covers general, business analysis core skills and situational interview questions with suggested answers. In my professional career, I have interviewed 100s of IT professionals at different levels. I came across several professionals, who could not answer questions as effectively as I would have liked. Even though, I can make out that they knew the answers but could not structure them well. I wanted to create a self-help book which

would enable business analysts doing well in the interviews and getting their dream jobs. This book has four sections as describes below. Section I deals with general questions. These questions give the interviewer(s) the first impression about your confidence, composure, and basic communication skills. This section includes General questions about you and your profile as well as General BA questions about the role and the projects. Second II - Business Analysis core skills has questions relating to Requirements elicitation, techniques, UML modelling, Requirements specifications documentation (Business Analysis core skills). It covers various aspects of requirements, Use cases, process diagrams, SRS and its elements, prioritization, elicitation, verification, and validation etc. It is also the longest section of the book. Section III deals with Agile, SCRUM and user stories. There are advance questions relating to personas and application usability as well. Section IV includes some additional questions on Business analysis. Section V deals with the situation / scenario-based questions. These questions are asked in the BA interviews regularly. I have tried to cover 20+ situations questions to provide a wide coverage. Each of the answers have been provided with the context and suggested answers. Contributors I must thank my colleagues Rashmi Srivastava and Neha for the sincere and diligent contributions to help me with inputs and feedbacks. Abhishek Srivastava
