The days, the seasons, the years pass by... Our body can predict and prepare itself for the environmental changes. Predictability is very important to optimize its performance. However, how do our cells know when it is day, night, summer or winter? They need a signal, and that's where melatonin comes in. It is a hormone produced by a gland in the middle of our brain called pineal gland. Pineal gland only produces melatonin at night (and in the dark)! So melatonin is the sign our cells were waiting to tell them it is night. It turns out that in the modern world, we are overexposed to light. People work at night when they should be sleeping. Blue light coming from our TV, computer or smartphone can block melatonin production. Light exposure at night prevents our body to predict properly the environmental changes so it loses its rhythmicity. Disturbances of melatonin rhythms are associated with various health problems such as neurodegenerative diseases, heart disease, hypertension, and even cancer. See? Melatonin's actions go far beyond making you sleep ... and that's what I want to tell you in this book.

Após o surgimento da pandemia de COVID-19, tornou-se mais evidente a importância do profissional enfermeiro na atenção ao paciente em estado crítico. A complexidade clínica apresentada pelos pacientes que foram expostos a forma grave da doença exigiu da equipe multidisciplinar, mas principalmente do enfermeiro o conhecimento profundo de diversos protocolos terapêuticos.

Associado a esta necessidade, tornou-se mais evidente as fragilidades teórico-práticas que os profissionais carregam mesmo após a formação universitária. A apresentação desta obra tem como objetivo atuar sobre estas fragilidades, servindo como fonte de pesquisa, mas também como ferramenta para o exercício do raciocínio clínico e um manual que norteará o caminho que o leitor deverá percorrer ao se iniciar o estudo sobre determinada patologia. A abordagem das doenças discutidas na obra, não tiveram como critério de escolha as características epidemiológicas, mas a amplitude do conhecimento abordado em cada sistema orgânico. Obra direcionada para as disciplinas de Saúde do Adulto e atenção ao paciente internado em unidade semi-intensiva e intensiva, para alunos cursando o curso de bacharel em enfermagem e especialização em UTI-Adulto. Pode servir como leitura complementar para disciplinas como Saúde do Idoso e Saúde da Mulher. Texto relevante para a consulta de profissionais das diversas áreas do conhecimento em saúde, devido à ampla discussão sobre aspectos fisiológicos e fisiopatológicos, além da aplicação dos estudos de caso como objeto de discussão para outras estratégias terapêuticas. Indicado também para professores de enfermagem que podem utilizar do conteúdo para direcionar discussões, incentivando o desenvolvimento da visão clínica dos estudantes.

The development of non-invasive brain function measurement has enabled the knowledge that brain activity is the basis of human behavior and mental activity. Electroencephalography (EEG) is a method that measures the electrical nerve activity (primary signal) in the brain. EEG characteristics include high time resolution and low spatial resolution, but recently it has become possible to estimate the source of EEG signals due to advances in analysis and measurement techniques. Moreover, in the medical field, EEG is usually used as examination equipment, but it has been used as a rehabilitation tool to control human behavior and mental activity in recent years. This book outlines basic research and clinical applications of EEG.
