This collection of leading scholars presents reflections on both wisdom as a general concept throughout history and cultures, as well as the contested nature of the category of Wisdom Literature.

The first half of the collection explores wisdom more generally with essays on its relationship to skill, epistemology, virtue, theology, and order. Wisdom is examined in a number of different contexts, such as historically in the Hebrew Bible and its related cultures, in Egypt and Mesopotamia, as well as in Patristic and Rabbinic interpretation. Additionally, wisdom is examined in its continuing relevance in Islamic, Jewish, and Christian thought, as well as from feminist, environmental, and other contextual perspectives. The second half of the volume considers "Wisdom Literature" as a category. Scholars address its relation to the Solomonic Collection, its social setting, literary genres, chronological development, and theology. Wisdom Literature's relation to

other biblical literature (law, history, prophecy, apocalyptic, and the broad question of "Wisdom influence") is then discussed before separate chapters on the texts commonly associated with the category. Contributors take a variety of approaches to the current debates surrounding the viability and value of Wisdom Literature as a category and its proper relationship to the concept of wisdom in the Hebrew Bible. Though the organization of the volume highlights the independence of wisdom as concept from "Wisdom Literature" as a category, seeking to counter the lack of attention given to this question in the traditional approach, the inclusion of both topics together in the same volume reflects their continued interconnection. As such, this handbook both represents the

current state of Wisdom scholarship and sets the stage for future developments.

Traces of the living animal run across the entire corpus of medieval writing and reveal how pervasively animals mattered in medieval thought and practice. In fascinating scenes of cross-species encounters, a raven offers St. Cuthbert a lump of lard that waterproofs his visitors' boots for a whole year, a scholar finds inspiration for his studies in his cat's perfect focus on killing mice, and a dispossessed knight wins back his heritage only to give it up again in order to save the life of his warhorse. Readers

have often taken such encounters to be merely figurative or fanciful, but Susan Crane discovers that these scenes of interaction are firmly grounded in the intimate cohabitation with animals that characterized every medieval milieu from palace to village. The animal encounters of medieval literature reveal their full meaning only when we recover the living animal's place within the written animal. The grip of a certain humanism was strong in medieval Britain, as it is today: the humanism that conceives animals in diametrical opposition to humankind. Yet medieval writing was far from univocal in this regard. Latin and vernacular works abound in other ways of thinking about animals that invite the saint, the scholar, and the knight to explore how bodies

and minds interpenetrate across species lines. Crane brings these other ways of thinking to light in her readings of the beast fable, the hunting treatise, the saint's life, the bestiary, and other genres. Her substantial contribution to the field of animal studies investigates how animals and people interact in culture making, how conceiving the animal is integral to conceiving the human, and how cross-species encounters transform both their animal and their human participants.

How do ordinary people from different regions around the world define peace and reconciliation? What factors do they think are necessary for promoting

reconciliation between countries? Do they believe that individuals have a right to protest against war and in favor of peace? Do they believe that apologies can improve the chances of reconciliation? What do they think are the best ways for achieving peace? Does reasoning regarding the achievability of world peace vary by region?

International Handbook of Peace and Reconciliation, a companion volume to the International Handbook on War, Torture, and Terrorism, examines and analyzes how people around the world think about justice, governmental apologies, the right to protest, the peace process, the justifiability of armed conflict, the possibility of world peace, and reconciliation. To address these questions, researchers from the Group

on International Perspectives on Governmental Aggression and Peace (GIPGAP) administered the Personal and Institutional Rights to Aggression and Peace Survey (PAIRTAPS) to volunteers from over 40 countries representing the major regions of the world. The volume is organized such that the responses to the survey are summarized and analyzed by both by country and by theme. Integrative chapters provide an up-to-date overview of historical and current events relevant to peace and reconciliation and a grounded theory analysis of definitions of peace and reconciliation and of the role of apology in reconciliation. In addition to describing the major themes emerging from the responses in each region, the volume reports on some exploratory analyses

addressing the extent to which we found differences in patterns of responding based on characteristics such as gender, military experience, and involvement in anti-war protest activity. International Handbook on Peace and Reconciliation allows ordinary citizens from around the world to voice their views on peace and related issues, and examines the context of these views. Thus, it offers researchers in political science, peace psychology, social psychology, social justice, and anthropology a comprehensive resource for a changing global landscape.
