The instructional framework presented in this book is intended to help teachers provide all young children, but especially English-language learners, with rich, meaningful, and interactive literacy instruction. Referred to as LEALE, the instruction is grounded in the traditional Language Experience Approach (LEA). It has been expanded to encompass principles and practices of research-based early literacy instruction as understood and presented in current professional literature. The approach is presented in an attractive, easily understood style that invites both beginning and experienced teachers to engage their students in literacy. The LEALE instructional framework presented here grew out of the many happy hours that the author spent working with children and their teachers over the years. Technology has become an integral part of teaching and learning in classrooms around the world. Teachers are nurturing 21st century learners who grow up with computers, gadgets, and internet access. Technology has been an extension of their lives, including their academic pursuits. Technology is of much value for EFL learners. Technology has offered opportunities for learners to access wide-range information. Technology is strongly linked with learner autonomy, where students

can learn independently in their pace or space. It also offers learners more opportunities to collaborate with friends. When the information is not scarce for learners, teachers are challenged to create innovations and provide learners with exciting learning experiences through technology. We can enhance language learning through various digital media. Language teachers can use the Internet to access wealth range of authentic resources, materials, and tasks. Technology also allows teachers to communicate with students outside the classroom walls. Designed for English language teachers and learners, this covers both theoretical and practical knowledge of using these technical media in language learning. Besides elaborating on a general overview of teaching media as well as its integration in language learning, the book also discusses some practical use of digital tools. Hopefully, this book can help EFL learners and teachers reap the benefits of technology in the classroom.

The field of early literacy has seen significant recent advances in theory, research, and practice. These volumes bring together leading authorities to report on current findings, integrate insights from different disciplinary perspectives, and explore ways to provide children with the strongest possible literacy foundations in the first 6 years of life. The Handbook first addresses broad questions about the nature of emergent literacy, summarizing current knowledge on cognitive pathways, biological underpinnings, and the importance of cultural contexts. Chapters in subsequent sections examine various strands of knowledge and skills that emerge as children become literate, as well as the role played by experiences with peers and families. Particular attention is devoted to the challenges involved in making schools work for all children, including members of linguistic and ethnic minority groups and children living in poverty. Finally, approaches to instruction, assessment, and early intervention are described, and up-to-date research on their effectiveness is presented.

A Dictionary of the English Language ... Mainly Abridged from the Latest Edition of the Quarto Dictionary of Noah Webster Partridge Publishing

The teaching of English in the Asian context is always challenging and dynamic because both teachers and learners have diverse linguistic and cultural backgrounds. Equally important, where English is not widely used outside the classroom, English language classrooms are an authentic site of learner engagement. For these reasons, for all those concerned with contemporary English language teaching (ELT) in Asia, *Asian English Language Classrooms: Where Theory and Practice Meet*, provides an account of theoretical orientations and practices in the teaching of English to multilingual speakers whose primary language is not English. While covering the fundamental ELT areas (e.g., the teaching of language skills, educational literature, the use of technology in ELT, the role of pragmatics in ELT, social psychology of the language classroom, and language classroom management) with which every language teacher and teacher trainer must be concerned, this volume showcases how particular orientations shape ELT practices. We believe that practicing English teachers must have a heightened awareness of the theory behind their practice. At the same time, the theoretical stance must be firmly anchored in actual classrooms. Containing newly commissioned chapters written by well-regarded and emerging scholars, this book will appeal not only to beginning teachers or teachers in training but also to established teachers around Asia

where English is used as a lingua franca. If you are a student teacher of English or an English teacher who would like to see what other progressive teachers like you are doing across Asia, this is the book you have been looking for.

As the United States continues to be a nation of immigrants and their children, the nation's school systems face increased enrollments of students whose primary language is not English. With the 2001 reauthorization of the Elementary and Secondary Education Act (ESEA) in the No Child Left Behind Act (NCLB), the allocation of federal funds for programs to assist these students to be proficient in English became formula-based: 80 percent on the basis of the population of children with limited English proficiency¹ and 20 percent on the basis of the population of recently immigrated children and youth. Title III of NCLB directs the U.S. Department of Education to allocate funds on the basis of the more accurate of two allowable data sources: the number of students reported to the federal government by each state education agency or data from the American Community Survey (ACS). The department determined that the ACS estimates are more accurate, and since 2005, those data have been basis for the federal distribution of Title III funds. Subsequently, analyses of the two data sources have raised concerns about that decision, especially because the two allowable data sources would allocate quite different amounts to the states. In addition, while shortcomings were noted in the data provided by the states, the ACS estimates were shown to fluctuate between years, causing concern among the states about the unpredictability and unevenness of program funding. In this context, the U.S. Department of Education commissioned the National Research Council to address the accuracy of the estimates from the two data sources and the factors that influence the estimates. The resulting book also considers means of increasing the accuracy of the data sources or alternative data sources that could be used for allocation purposes.
