*Loving Animals* W. W. Norton & Company  
Human sexuality touches us all, pun intended. We all either enjoy it, struggle with it, or may have been victims of it. Sexuality is not just about sex, but about human sexual function, the physiology of sex, the hormones involved and how they affect us, and the cultural norms related to it. Sexual

function and dysfunction are closely tied to one's self-esteem, self-respect, and to relationships with intimate partners. *Human Sexuality: Function, Dysfunction, Paraphilias, and Relationships*, explores the interplay of intimacy and sexuality; how it can enhance relationships, and how it can negatively affect them, or be affected by them. When individuals or partners encounter sexual problems or dysfunctions it can have a long-lasting affect both biologically and psychologically. Dr.

Rokach explores the causes and the reasons that these dysfunctions are maintained, and successful treatment methods. Chapters on sexual offenses and paraphilias and what treatment options are available to sexual offenders are also included. This book is the first book to place sexuality where it belongs, within the context of relationships demonstrating how sexuality relates to intimacy by both enhancing and negatively

affecting it. Explains psychological, biological and sociological theories of sexuality Addresses sexual dysfunctions according to various models of sex therapy Discusses the biological, developmental and sociological theories of sexual orientation Explores the specific hormones in male and female sexual behavior

Iconoclasm - the alteration, destruction, or displacement of icons - is usually considered taboo

or profane. But, on occasion, the act of destroying the sacred unintentionally bestows iconic status on the desecrated object. Iconoclasm examines the reciprocity between the building and the breaking of images, paying special attention to the constructive power of destructive acts. Although iconoclasm carries with it inherently religious connotations, this volume examines the shattering of images beyond the spiritual and the sacred. Presenting responses to

renowned cultural anthropologist and theorist Michael Taussig, these essays centre on conceptual iconoclasm and explore the sacrality of objects and belief systems from historical, cultural, and disciplinary perspectives. From Milton and Nietzsche to Paul Newman and Banksy, through such diverse media and genres as photography, the popular romance novel, pornography, graffiti, cinema, advertising, and the dictionary, this book questions how icons and

iconoclasms are represented, the language used to describe them, and the manner in which objects signify once they are shattered. An interdisciplinary, disconnected, and non-linear consideration of the historical and contemporary relationship between the sacred and the profane, *Iconoclasm* disrupts entrenched views about the revered or reviled idols present in most aspects of daily life. Contributors include T. Nikki Cesare Schotzko (Toronto), Christopher van

Ginhoven Rey (Pomona College), Helen Hester (West London), Emily Hoffman (Arkansas Tech), Natalie B. Pendergast (Yukon College), Beth Saunders (Maryland), Adam Swann (Glasgow), Michael Taussig (Columbia), Angela Toscano (Iowa), Brendon Wocke (Perpignan). *The Oxford English Dictionary* St. Martin's Press  
 With twenty-five essays, fourteen of which are new to this edition, this best-selling volume examines the nature, morality, and

social meanings of contemporary sexual phenomena. Topics include sexual desire, masturbation, sex on the Internet, homosexuality, transgender and transsexual issues, rape, and promiscuity. New chapters discuss polyamory, transgender issues, queer issues, paraphilia, drugs and sex, objectification, BDSM, cybersex, and sex and race. Updated and new discussion questions offer students starting points for debate in both the classroom and the

bedroom.

The planet is sick. Human beings are guilty of damaging it. We have to pay. Today, that is the orthodoxy throughout the Western world. Distrust of progress and science, calls for individual and collective self-sacrifice to 'save the planet' and cultivation of fear: behind the carbon commissars, a dangerous and

counterproductive ecological catastrophism is gaining ground. Modern society's susceptibility to this kind of thinking derives from what Bruckner calls "the seductive attraction of disaster," as exemplified by the popular appeal of disaster movies. But ecological catastrophism is harmful in that it draws attention away from other, more solvable problems and injustices in the world in order to focus on something that is portrayed as an Apocalypse. Rather than

preaching catastrophe and pessimism, we need to develop a democratic and generous ecology that addresses specific problems in a practical way.

'People love animals—a stroke here, a pat there, a quick nuzzle in that gorgeous fur ... the amount of cuddling they get can make you jealous. In Holland, dogs are caressed more than people. Not as thoroughly, though: that one spot,

somewhere down below, generally remains untouched ... ' Generally, but certainly not always. Kinsey's research showed that 8 per cent of men and 3.5 per cent of women had had sex with an animal, and that in rural areas the figure for men was closer to 50 per cent. Yet bestiality is almost universally condemned. While our love for animals is extolled as noble and 'natural', all erotic elements in the relationship between humans and other species

are vilified and proscribed, thus consigning them to the realm of exotic pornography or crude innuendo. Even so, something remains of physical love for animals. In different forms, sublimated or occasionally celebrated, its traces can be found throughout art and popular culture: in Leda and the Swan, Beauty and the Beast or the Lorelei; in a lubricious menagerie of satyrs and centaurs, wolfmen and vampires, all the way through to King Kong and

Fritz the Cat, pony clubs and amorous dolphins, or even advertisements for luxury catfoods. Dearest Pet uncovers and explores those traces, illuminating the ambivalence of human attitudes to cross-species sexuality. Its author, the biologist and broadcaster Midas Dekkers, has analysed bestiality in all its aspects—physical, psychological and legal—and examined its representations in religion and mythology, art and literature, pornography and advertising.

Beautifully—and sometimes bizarrely—illustrated, his book is neither drily academic nor pruriently trivial, but erudite, witty and challenging: the first history of the last taboo. A book for animal lovers, and for those who are just their good friends.

What does it mean to live and die in relation to other animals? *Animal Intimacies* posits this central question alongside the intimate—and intense—moments of

care, kinship, violence, politics, indifference, and desire that occur between human and non-human animals. Built on extensive ethnographic fieldwork in the mountain villages of India's Central Himalayas, Radhika Govindrajan's book explores the number of ways that human and animal interact to cultivate relationships as interconnected, related beings. Whether it is through the study of the affect and ethics of ritual animal sacrifice, analysis of the right-wing political

project of cow-protection, or examination of villagers' talk about bears who abduct women and have sex with them, Govindrajan illustrates that multispecies relatedness relies on both difference and ineffable affinity between animals. *Animal Intimacies* breaks substantial new ground in animal studies, and Govindrajan's detailed portrait of the social, political and religious life of the region will be of interest to cultural anthropologists and scholars of South Asia as

well.

Dogopolis suggests a surprising source of urban innovation in the history of three major cities: human-canine relationships. Stroll through any American or European city today and you probably won't get far before seeing a dog being taken for a walk. It's expected that these domesticated animals can easily navigate sidewalks, streets, and other foundational elements of our built environment. But

what if our cities were actually shaped in response to dogs more than we ever realized? Chris Pearson's *Dogopolis* boldly and convincingly asserts that human-canine relations were a crucial factor in the formation of modern urban living. Focusing on New York, London, and Paris from the early nineteenth century into the 1930s, Pearson shows that human reactions to dogs significantly remolded them and other contemporary western cities. It's an unalterable

fact that dogs—often filthy, bellicose, and sometimes off-putting—run away, spread rabies, defecate, and breed wherever they like, so as dogs became a more and more common in nineteenth-century middle-class life, cities had to respond to people's fear of them and revulsion at their least desirable traits. The gradual integration of dogs into city life centered on disgust at dirt, fear of crime and vagrancy, and the promotion of

humanitarian sentiments. On the other hand, dogs are some people's most beloved animal companions, and human compassion and affection for pets and strays were equally powerful forces in shaping urban modernity. Dogopolis details the complex interrelations among emotions, sentiment, and the ways we manifest our feelings toward what we love—showing that together they can actually reshape society. *Webster's New International Dictionary of*

Sex with animals is one of the last taboos but, for a practice that is generally regarded as abhorrent, it is remarkable how many books, films, plays, paintings, and photographs depict the subject. So, what does loving animals mean? In this book the renowned historian Joanna Bourke explores the modern history of sex between humans and animals. Bourke looks at the changing meanings of

“bestiality” and “zoophilia,” assesses the psychiatric and sexual aspects, and she concludes by delineating an ethics of animal loving. *The Fanaticism of the Apocalypse* Scientific American / Farrar, Straus and Giroux  
This work offers 18 ground-breaking articles, written by an international group of philosophers, on companion animal ethics. It explores the ethical foundations of our relationships with pets, in particular dogs and cats, and specific moral issues,

including breeding, reproduction, sterilization, cloning, adoption, feeding, training, working, sexual interactions, longevity, dying, and euthanasia.--

Sexuality is the fifth revised and updated

edition of the classic text for understanding human sexuality. This new edition brings the arguments and evidence fully up to date and explores their implication for many topical controversies, around LGBTQ+ rights, the trans experience and gender fluidity, same-sex marriage, sexual autonomy and consent, and the meanings of sexual choice. Since it was first published in the 1980s, Sexuality has been at the cutting edge of the study of the social and historical meanings of

sexuality. Blending deep empirical knowledge with theoretical sophistication and an acute sensitivity to the politics of sexuality, the book offers an informed framework for understanding the complexities of sexual life. A key insight of the book is that the ways we think and speak about sexuality make a major contribution to the ways we live it. Sexuality may be rooted in biological possibilities, but it is shaped and experienced through languages and meanings which are inevitably

historical and social in nature. The book explores with clarity and precision the invention and re-invention of sexual meanings, the question of what constitutes a true sex and the biological and social roots of sexual difference, the challenges of diversity, the re-making of sexuality as a highly divisive political subject and the implications of the transformation of intimate life in the past few generations. These are seen in the context of profound changes that are re-fashioning the world,

especially globalisation, cyber-sex, and the rise of new forms of agency, including among women and LGBTQ+ people, which have fed into new claims for sexual human rights. This new edition of *Sexuality* will be an indispensable guide for students in the social sciences with an interest in the ever-changing worlds of sexuality. Alexa Tsoulis-Reay's *Finding Normal* is an author's up close tour of people who are using the

Internet to challenge the boundaries of what's taboo and what it means to be normal. *Finding Normal* explores how people are using the internet to find community, forge connections, and create identity in ways that challenge a variety of sexual norms. Based on a highly candid interview series conducted for *New York* magazine's human science column—"What It's Like"—each story in *Finding Normal* intimately immerses the reader in the world of a person who

is grappling with a unique set of circumstances relating to sexuality. *Finding Normal* at once celebrates the power of our evolving media landscape for helping people rewrite the script for their lives and offers a warning about the danger of that seemingly limitless freedom. Tsoulis-Reay shows the enduring power of the search for belonging—for humans and society. Like happiness of life purpose, finding normal is perhaps the definitive human struggle.

The movie *The Zookeeper's Wife*, based on the New York Times bestselling book, opens March 2017. 1939: the Germans have invaded Poland. The keepers of the Warsaw zoo, Jan and Antonina Zabinski, survive the bombardment of the city, only to see the occupiers ruthlessly kill many of their animals. The Nazis then carry off the prized specimens to Berlin for their program to create the “purest”

breeds, much as they saw themselves as the purest human race. Opposed to all the Nazis represented, the Zabinskis risked their lives by hiding Jews in the now-empty animal cages, saving as many as three hundred people from extermination. Acclaimed, best-selling author Diane Ackerman, fascinated both by the Zabinskis' courage and by Antonina's incredible sensitivity to all living beings, tells a moving and dramatic story of the power of empathy and the strength of love. Bestiality and Zoophilia: Sexual Relations with Animals is a special issue of *Anthrozoös*, the journal of the International Society for Anthrozoology -- a multi-disciplinary journal of the interactions of people and animals.

Bulletin... (non-technical) of the Scripps Institution of Oceanography, La Jolla, California Academic Press

The relationship between humans and animals has

always been strong, symbiotic and complicated. Animals, real and fictional, have been a mainstay in the arts and entertainment, figuring prominently in literature, film, television, social media, and live performances.

Increasingly, though, people are anthropomorphizing animals, assigning them humanoid roles, tasks and identities. At the same time, humans, such as members of the furry culture or college mascots, find pleasure in

adopting animal identities and characteristics. This book is the first of its kind to explore these growing phenomena across media. The contributors to this collection represent various disciplines, to include the arts, humanities, social sciences, and healthcare. Their essays demonstrate the various ways that human and animal lives are intertwined and constantly evolving. A New English Dictionary on Historical Principles: part 1. Why do testicles hang the way they do? Is there an adaptive function to the female orgasm? What does it feel like to want to kill yourself? Does "free will" really exist? And why is the penis shaped like that anyway? In *Why Is the Penis Shaped Like That?*, the research psychologist and award-winning columnist Jesse Bering features more than thirty of his most popular essays from *Scientific American* and *Slate*, as well as two new pieces, that take readers on a

bold and captivating journey through some of the most taboo issues related to evolution and human behavior. Exploring the history of cannibalism, the neurology of people who are sexually attracted to animals, the evolution of human body fluids, the science of homosexuality, and serious questions about life and death, Bering astutely covers a generous expanse of our kaleidoscope of quirks and origins. With his characteristic irreverence and trademark

cheekiness, Bering leaves no topic unturned or curiosity unexamined, and he does it all with an audaciously original voice. Whether you're interested in the psychological history behind the many facets of sexual desire or the evolutionary patterns that have dictated our current mystique and phallic physique, *Why Is the Penis Shaped Like That?* is bound to create lively discussion and debate for years to come. Reels for 1973- include Time index, 1973- Webster's New International Dictionary of the English Language Recounts the remarkable life of a Prussian/Polish Jew who immigrated to the United States as a teenager in the 1850s and became one of the nation's best-known physicians by the turn of the century After medical study in South Carolina and Virginia on the eve of the Civil War, Simon Baruch served the Confederacy as a surgeon for three years, twice

undergoing capture and internment. Despite economic hardships while practicing in South Carolina during Reconstruction, he helped to reactivate the State Medical Association and served as president of the State Board of Health. In 1881 he joined the exodus of southern physicians and scientists of that period, taking up residence in New York City, where he rose to prominence through his advocacy of surgery in one of the early operations for

appendicitis and through is role as the protective physician in a widely publicized "child cruelty" case involving the musical prodigy, Josef Hofmann. Baruch became a leader in the nationwide movement to establish free public baths for tenement dwellers and in the development of expert medical journalism. Although his advocacy of such natural remedies as water, fresh air, and diet often made him appear unaccountably iconoclastic to his

contemporaries, he has gained posthumous recognition as a pioneer in physical medicine. Bernard N. Baruch, one of his four sons, has memorialized this work through endowments for research and instruction in physical medicine and rehabilitation. Ward reconstructs the life of a medical student in the South at the opening of the Civil War, the adventures of a Confederate surgeon, and the difficulties of a practitioner in

Reconstruction South Carolina. Simon Baruch's physician's registers and his correspondence with colleagues afford the reader an immediate sense of the therapeutic dilemmas facing physicians and patients of his era. Baruch's experiences while establishing himself in New York City after 1881 reflect the challenges facing those trying to break into what was then the nation's medical capital—as well as that

city's rich opportunities and heady intellectual atmosphere. His energetic campaign for free public baths illustrates one of the most colorful chapters of American social history, as immigrants flooded the cities at the turn of the century. As medical editor of the New York Sun from 1912 to 1918, Baruch touched on most of the health concerns of that period and a few—such as handgun control—that persist to this day.
