EBOOK: Understanding Business, Global Edition McGraw-Hill/Irwin

In a world full of chaos, crises, despair, and calamities, it is easy to dismiss life's little miracles, particularly God's presence, in everyone's life. When Maureen McCormick McHugh's paternal grandfather and maternal grandmother passed away, she began to find nickels everywhere—in car seats, in sidewalks, or even her change from the grocery store. She first dismissed the signs, until she realized that whenever she prayed the hardest, it was when she always found the nickels. Pondering over the matter led her to believe that the nickels were signs her angels were listening to her. Later on, the nickels turned to dimes, a symbol of spiritual presence that helped her and her loved ones cope with unfortunate life situations, especially the battle with cancer and eventual death of their brother, Tim. With the dimes appearance every now and then, apart from other symbols, she knows she would never be alone if life's uncertainties once again befall her. She knows in her heart that when death conquers her, God would let her be an angel to the loved ones she would leave behind, just like her grandpa, grandma, and Tim are doing to her now.

Washington's Farewell Address comprises various aspects of American political thinking. It reaches beyond any period limited in time and reveals the basic issue of the American attitude toward foreign policy: the tension between Idealism and Realism. Settled by men who looked for gain and by men who sought freedom, born into independence in a century of enlightened thinking and of power politics, America has wavered in her foreign policy between Idealism and Realism, and her great historical moments have occurred when both were combined. Thus the history of the Farwell Address forms only part of the wider, endless, urgent problem. Felix Gilbert analyzes the diverse intellectual trends which went into the making of the Farwell Address, and sheds light on its beginnings.

Understanding Business McGraw-Hill Education

Some years ago the author became very much impressed with the fact, which can be observed in any engineering organization, that the chief obstacles to the success of individual engineers or of the group comprising a unit were of a personal and administrative rather than a technical nature. It was apparent that both the author and his associates were getting into much more trouble by

violating the unwritten laws of professional conduct than by committing technical sins against the well-documented laws of science. Since the former appeared to be indeed unwritten at that time, as regards any adequate and convenient text, the following "laws" were originally formulated and collected into a sort of scrapbook, to provide a set of "house rules," or a professional code, for a design-engineering section of a large manufacturing organization. Although they are admittedly fragmentary and incomplete, they are offered here for whatever they may be worth to younger men just starting their careers, and to older men who know these things perfectly well but who all too often fail to apply them in practice. Just a few points should be emphasized: None of these "laws" is theoretical or imaginary, and however obvious and trite they may appear, their repeated violation is responsible for much of the frustration and embarrassment to which engineers everywhere are liable. In fact this paper is primarily a record, derived from direct observation over a period of seventeen years, of the experience of four engineering departments, three of them newly organized and struggling to establish themselves by the trial-and-error method. It has, however, been supplemented and confirmed by the experience of others as gathered from numerous discussions, lectures, and the literature, so that it most emphatically does not reflect the unique experience or characteristics of any one organization. Furthermore, many of these rules are generalizations to which exceptions will occur in special circumstances. There is no thought of urging a slavish adherence to rules and red tape, for there is no substitute for judgment, and at times vigorous individual initiative is needed to cut through formalities in an emergency. But in many respects these laws are like the basic laws of society; they cannot be violated too often with impunity, notwithstanding striking exceptions in individual cases.
