Electronic Control Systems in Mechanical Engineering Butterworth-Heinemann

Higher Engineering Science aims to provide students with an understanding of the scientific principles that underpin the design and operation of modern engineering systems. It has been written specifically for the core unit in the new BTEC Higher National Engineering scheme from Edexcel, and builds a sound scientific foundation for further study of electronics, electrical engineering and mechanical engineering. The core unit is compulsory for all HNC / HND students, and this book develops a coherent programme of study for this important part of the Higher National. The text is highly student-centred, providing numerous · worked examples with step-by-step guidance and hints · highlighted key facts and points of interest · self-check questions scattered through the text · problem sections (with answers supplied) It has been written to suit courses with an intake from a range of educational backgrounds, and a minimum of prior knowledge is assumed. A unified science course at this level is a completely new feature of the new Higher National programme. This means

that it will be a challenge for colleges, and that existing books will not match the content of the unit. Therefore, Higher Engineering Science will be the text of choice for students and lecturers alike. Higher Engineering Science will also be ideal for introductory science modules in degree courses. It follows on from Bill Bolton's highly successful Engineering Science. The book lecturers have been waiting for - clear, coherent exposition of principles. Follow on from the author's highly successful Engineering Science. No comparable text at present.

**Mechatronics** Routledge Engineering Materials Technology, Second Edition discusses the underlying principles of materials selection in mechanical and production engineering. The book is comprised of 20 chapters that are organized into five parts. The text first covers the structure of materials, such as metals, alloys, and non-metals. The second part deals with the properties of materials, which include fracture, fatigue, and creep. The third and fourth parts discuss the characteristics of metals and non-metals, respectively. The last part deals with the selection process; this part takes into consideration the various properties of materials and the processes it goes through. The book will be of great use to students and practitioners of mechanical and production engineering.
