Metal powders are just a tiny fraction of the global metals industry, yet they play a key role in such high-profile sectors as cars and consumer electronics. The global value of metal powder consumption has risen since 2000 to over \$3.7 billion from under \$3 billion. Part of this increase is due to recently escalating primary metal prices. The increase in overall tonnage shipped is in the order of 20%. This fourth edition of *Metal Powders: A Global Survey of Production, Applications & Markets 2001 - 2010* has been completely revised to include the most up-to-date information available, in order to provide a coherent picture of the development and status of the metal powder industry. The report is an overview of the production,

applications and markets for metal and alloy powders. The market data is presented primarily in terms of tonnages because of the widely different prices of these powders. Markets for each of the metal powder types are discussed in terms of the major application areas.

Market data for the main geographical areas are based on industry statistics, supplemented by company annual reports and by private estimates. Other data and forecasts have been compiled from literature surveys, personal visits and telephone interviews. * Review of metal and alloy powder consumption by type of powder and by geographical area

* Market forecasts to 2010 * Technical overview of metal powder production * Worldwide review of major producers

As Toyota skids into an ocean of problems and uncertainty continues in the U.S. automotive industry, Lemon-Aid Used Cars and Trucks 2011/2012 shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years. Lemon-Aid guides are unlike any other car and truck books on the market. Phil Edmonston, Canada's automotive Dr. Phil for 40 years, pulls no punches.

Like five books in one, Lemon-Aid Used Cars and Trucks is an exposé of car scams and gas consumption lies; a do-it-yourself service manual; an independent guide that covers beaters, lemons, and collectibles; an archive of secret service bulletins granting free repairs; and a legal primer that even lawyers can't beat! Phil delivers the goods on free fixes for Chrysler, Ford, and GM engine, transmission, brake, and paint defects; lets you know about Corvette and Mustang tops that fly off; gives the lowdown on Honda, Hyundai, and Toyota engines and transmissions; and provides the latest information on computer module glitches.

Marine Design XIII collects the contributions to the 13th International Marine Design Conference (IMDC 2018, Espoo, Finland, 10-14 June 2018). The aim of this IMDC series of conferences is

to promote all aspects of marine design as an engineering discipline. The focus is on key design challenges and opportunities in the area of current maritime technologies and markets, with special emphasis on:

- Challenges in merging ship design and marine applications of experience-based industrial design
- Digitalisation as technological enabler for stronger link between efficient design, operations and maintenance in future
- Emerging technologies and their impact on future designs
- Cruise ship and icebreaker designs including fleet compositions to meet new market demands

To reflect on the conference focus, Marine Design XIII covers the following research topic series:

- State of art ship design principles - education, design methodology, structural design, hydrodynamic design;
- Cutting edge ship designs and operations - ship concept design, risk and safety, arctic design, autonomous ships;
- Energy efficiency and propulsions - energy efficiency, hull form design, propulsion equipment design;
- Wider marine designs and practices - navy ships, offshore and wind farms and production.

Marine Design XIII contains 2 state-of-the-art reports on design methodologies and cruise ships design, and 4 keynote papers on new directions for vessel design practices and tools, digital maritime traffic, naval ship designs, and new tanker design for arctic. Marine Design XIII will be of interest to academics and professionals in maritime technologies and marine design.

The Last Layover is a fiction novel based on real places and potential scenarios where the comfort, security, and conveniences of our modern first world society quickly come to an end. Imagine yourself far from home when the world suddenly changes. Just think back to Hurricane Katrina, Hurricane Sandy, and other such recent events, and you can see just how quickly society breaks down. Those situations even occurred with the nature of the emergency being confined to one specific geographic area, where help is just the next town or state away. Now also think about how that scene would play out if help was not going to come. What if those who you would look to for help had their own emergencies to contend with, leaving you and those around you to fend for yourselves? What about all of those modern conveniences of society like ATM's, point of sale debit/credit card readers, cell phones, and the internet? What if it all went down while you were away from home? What about our food supply chain? How much food does your family have at home to get them through if the shelves were to go empty? How much do you have with you? Will it all go bad without electricity? Do you have what it takes to defend yourself and those around you when society takes an ugly turn and violence becomes necessary for survival? Those are a few of the things that this book helps you think about. In The Last Layover, an airline crew finds themselves on an overnight layover in New York City, far from their homes, when a series of

events take place that bring our modern society to its knees. Join them as they face the dangers and difficulties of trying to make their way back to their homes and families in a rapidly deteriorating society, without our modern transportation and communications infrastructure, all while dealing with the lawlessness and violence that quickly ensues in a desperate and broken society. Discover with them the dark side that humanity can quickly take, as well as the good that can come from faith, family, and friendship.

As U.S. and Canadian automakers and

dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'fess up."
