The effects of polio that occur decades after the disease has run its course-- weakness, fatigue, pain, intolerance to cold, difficulty with breathing and swallowing--are often more devastating than the original disease. This book on the diagnosis and management of polio-related health problems is an essential resource for polio survivors and their families and health care providers. Dr. Julie K. Silver, who has both personal and professional experience with post-polio

syndrome, begins the book by defining and describing PPS and providing a historical overview of its diagnosis and treatment. Chapters that follow discuss finding good medical care, dealing with symptoms, maintaining proper nutrition and weight, preventing osteoporosis and falls, and sustaining mobility. Dr. Silver reviews the latest in braces, shoes, assistive devices, and wheelchairs and scooters. She also explores issues involving managing pain, surgery, complementary and alternative medicine, safe and comfortable living environments, insurance and disability, and sex and intimacy.

' I have no hesitation in recommending this book highly for anyone working in the fields of emotion, learning, and memory, social neuroscience, and the contribution of the amygdala to human and non-human animal behaviour.'

Quarterly Journal of Experimental Psychology
The amygdala is a central component of the limbic brain system and is known to be vital to understanding aspects of emotion, memory and social behaviour.

Dysfunction of the structure is also thought to contribute to a variety of disorders, including autism, Alzheimer's

Disease and schizophrenia. The nature of its contribution to these fundamental aspects of behaviour and cognition, and its relationship with other regions of the brain has remained elusive. However, since Aggleton's first book on the subject - *The Amygdala: Neurobiological Aspects of Emotion, Memory, and Mental Dysfunction* (1992) - there have been major advances in our understanding of the processes involved and a dramatic rise in the volume of research. Scientists are now able to define its contribution in an increasingly precise manner. Leading experts from around the world have contributed chapters to this comprehensive and unique review, describing current thinking on this enigmatic brain structure. This is a book for all those with an interest in the

neural basis of emotion and memory.

Mastering APA Style Penguin
Careers in astronomy for women (as in other sciences) were a rarity in Britain and Ireland until well into the twentieth

century. The book investigates the place of women in astronomy before that era, recounted in the form of biographies of about 25 women born between 1650 and 1900 who in varying capacities contributed to its progress during the eighteenth, nineteenth and early twentieth centuries. There are some famous names among them whose biographies have been written before now, there are others who have received less than their due recognition while many more occupied inconspicuous and sometimes thankless places as assistants to male family members. All deserve to be remembered as interesting individuals in an earlier opportunity-poor age. Placed in roughly chronological order, their lives constitute a sample thread in the story of female

entry into the male world of science. The book is aimed at astronomers, amateur astronomers, historians of science, and promoters of women in science, but being written in non-technical language it is intended to be of interest also to educated readers generally.

The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch

between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.
