This is the first book created primarily for the field identification of parrots, one of the most familiar and colorful groups of birds. From the mighty macaws to the diminutive pygmy parrots, the 350 species of parrots include cockatoos, parakeets, lovebirds, and Budgerigar. Most are brightly colored or even gaudy, but a few are drab, and some are nocturnal and flightless. Parrots, found throughout most of the warmer regions of the world, occur in greatest numbers in Australasian and South America. This book includes 88 superb color illustrations of every species and most identifiable subspecies of parrot, as well as range maps of their locations. It offers many firsthand insights into the ecology of each species, vocalizations, life cycle characteristics, and geographical variation. It also provides up-to-date information on the conservation status of those species of parrots that are threatened or endangered.

Environmental conflicts over sustainability, EIA, biodiversity, biotechnology and risk, chemicals and public health, are not necessarily legalistic problems but land use problems. Edward Christie shows how solutions for these conflicts can be found via consensual agreement using an approach that integrates law, science and alternative dispute resolution (ADR). This book assesses the key unifying principles of environmental and administrative law in Australia, the UK/EU and USA, together with accepted scientific concepts of environmental management and protection. By doing so it provides a cross-disciplinary approach to collaborative problem-solving and decision-making, using ADR processes to resolve environmental conflicts and will be valuable to any environmental professional.

This book has been written to meet the requirements of any environmental professional - lawyer, scientist, engineer, planner - who directly, or indirectly, may be involved in development or planning conflicts when the environment is in issue. For the lawyer, this book, with its focus on understanding and integrating unifying legal principles and scientific concepts, consolidates opportunities for assessing and resolving environmental conflicts by negotiation. For the environmental professional, the book provides opportunities for managing environmental conflicts. In addition, opportunities are identified for resolving environmental conflicts by negotiation, but in quite specific situations i.e. when the interpretation and application of questions of law are not in issue and only factual (scientific) issues are in dispute. It will also of course strongly appeal to academics and researchers of environmental studies and environmental law. It will also appeal to the indigenous community and environmental groups who are seeking more direct and effective inputs into resolving environmental conflicts.

Fifty years after its first publication, the multimillion-copy international bestseller is available again in English, sharing the heartbreaking tale of a gifted, mischievous, direly misunderstood boy growing

up in Rio de Janeiro. When Zezé grows up, he wants to be a poet in a bow tie. For now the precocious young boy entertains himself by playing clever pranks on the residents of his Rio de Janeiro neighborhood, stunts for which his parents and siblings punish him severely. Lately, with his father out of work, the beatings have become harsher. Zezé's only solace comes from his time at school, his hours secretly spent singing with a street musician, and the refuge he finds with his precious magical orange tree. When Zezé finally makes a real friend, his life begins to change, opening him up to human tenderness but also wrenching sorrow. Never out of print in Brazil since it was first published in 1968, *My Sweet Orange Tree*, inspired by the author's own childhood, has been translated into many languages and has won the hearts of millions of young readers across the globe.

O *Alouatta belzebul*, um primata conhecido como bugio, possui uma ampla distribuição geográfica. Os animais desta espécie são de comportamento discreto, com movimentos lentos, têm sua dieta fundamentalmente folívora. O presente estudo tem por finalidade descrever a anatomia macroscópica da coxa e perna de *A. belzebul*, como a origem e inserção muscular, irrigação e inervação de suas estruturas. Após dissecação, observou-se que os ossos como acidente anatômico têm sua similaridade com o humano, assim, os músculos da coxa e perna do *A. belzebul* são: tensor

da fásia lata, sartório, vasto lateral, vasto medial, vasto intermédio, adutor longo, adutor curto, pectíneo, grácil, bíceps femoral, semitendinoso, semimembranoso, supridos pela artéria femoral e nervo isquiático e suas ramificações, gastrocnêmio, sóleo, poplíteo, tibial posterior, tibial anterior, flexor longo dos dedos, flexor longo do hálux, fibular longo e curto, extensor acessório, extensor longo dos dedos, extensor longo do hálux. Semelhantes às observações feitas no *A. belzebul*, encontramos a similaridade na descrição com os humanos e em demais primatas não humanos, como *Sapajus libidinosus*, chimpanzés e babuínos, supostamente por ambos serem quadrúpedes, apresentarem comportamento semibípede e arborícola.

The CEC-seminar on "Indicators relevant to Animal Welfare" was held on November 9 - 10, 1982 at the Institut fUr Tierzucht und Tierverhalten, Mariensee, of the Bundesforschungsanstalt fUr Landwirtschaft (FAL) - It was the intention of this meeting to outline the present state of knowledge on proven and potential indicators and to discuss their applicability in the assessment of farm animal management systems. After an introduction of the legal and material aspects of animal welfare, the following topics were dealt with : - Significance of indicators relevant to animal welfare - Integrated systems of indicators relevant to animal welfare - Applicability of indicators in animal welfare research and control procedures. The concluding discussion focussed on the applicability of indicators in science and in practice. As a result of the seminar, the presently known indicators can be grouped into the following categories : - indicators already being applied to animal welfare assessment in practice, such as morbidity and mortality, technopathies, behavioural aberrations and production performances; - indicators of high sensitivity, such as physiological criteria, which as yet are too demanding for general application; - indicators still under investigation for their reliability. It became also evident that the continuous integration of indicators into comprehensive assessment systems promises an ever improving judgement of animal welfare problems. The proceedings will be of substantial value to the CEC in the pursuit of animal welfare problems
