Sustaining Change in Organizations Springer

Although workplace design and management are gaining more and more attention from modern organizations, workplace research is still very fragmented and spread across multiple disciplines in academia. There are several books on the market related to workplaces, facility management (FM), and corporate real estate management (CREM) disciplines, but few open up a theoretical and practical discussion across multiple theories from different disciplines. Therefore, workplace researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied. A lot of knowledge is lost between disciplines, and sadly, many insights do not reach workplace managers in practice. Therefore, this new book series is started by associate professor Rianne Appel-Meulenbroek (Eindhoven University of Technology, the Netherlands) and postdoc researcher Vitalija Danivska (Aalto University, Finland) as editors, published by Routledge. It is titled 'Transdisciplinary Workplace Research and Management' because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice. The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace-related issues in practice, such as knowledge worker productivity, office use, and more strategic management. In addition, the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice. This book series is relevant for workplace experts both in academia and industry. This second book in the series focuses on the role of workplace management in the organization and the tasks that workplace management needs to consider. The 18 theories that are presented in this book and applied to workplace research discuss management aspects from the organization's perspective or dive deeper into issues related to people and/or building management. They all emphasize that workplace management is a complex matter that requires more strategic attention in order to add value for various stakeholders. The final chapter of the book describes a first step towards integrating the presented theories into an interdisciplinary framework for developing a grand workplace management theory.

These are the proceedings of the 7th International Workshop on Cooperative Information Agents (CIA 2003), held at the Sonera Conference Center in Helsinki, Finland, August 27-29, 2003. It was co-located with the 4th Agentcities Information Days. One key challenge of developing advanced agent-based information systems is to balance the autonomy of networked data and knowledge sources with the potential payoff of leveraging them by the appropriate use of intelligent information agents on the Internet. An information agent is a computational software entity that has access to one or multiple, heterogeneous, and distributed data and information sources; proactively searches for and maintains relevant information on behalf of its human users or other agents, preferably just-in-time. In other words, it is managing and overcoming the difficulties associated with information overload in the open and exponentially growing Internet and Web. Depending on the application and tasks at hand information agents may collaborate in open, networked data and information environments to provide added value to a variety of applications in different domains. Thus, research and development of information agents is inherently interdisciplinary: It requires expertise in information retrieval, artificial intelligence, database systems, human-computer interaction, and Internet and Web technology. Initiated in 1997, the purpose of the annual international workshop series

on cooperative information agents (CIA) is to provide an interdisciplinary forum for researchers, software developers, and managers to get informed about, present, and discuss the latest high-quality results in advancements of theory and practice in information agent technology for the Internet and Web. Each event of this renowned series attempts to capture the intrinsic interdisciplinary nature of this research area by calling for contributions from different research communities, and by promoting open and informative discussions on all related topics.

Tremendous forces for change are radically reshaping the world of work. Disruptive innovations, radical thinking, new business models and resource scarcity are impacting every sector. Although the scale of expected change is not unprecedented, what is unique is the pervasive nature of the change and its accelerating pace which people in organizations have to cope with. Structures, systems, processes and strategies are relatively simple to understand and even fix. People, however, are more complex. Change can have a different impact on each of them, all of which can cause different attitudes and reactions. *Managing and Leading People Through Organizational Change* is written for leaders with the key responsibility of managing people through transitions. *Managing and Leading People through Organizational Change* provides a critical analysis of change and transformation in organizations from a theoretical and practical perspective. It addresses the individual, team and organizational issues of leading and managing people before, during and after change, using case studies and interviews with people from organizations in different sectors across the globe. This book demonstrates how theory can be applied in practice through practical examples and recommendations, focusing on the importance of understanding the impact of the nature of change on individuals and engaging them collaboratively throughout the transformation journey.

This new book explores the recent issue of cross-cultural management from both theoretical and research perspectives. It considers the impact of knowledge, experience, and exposure of cross-cultural differences in developing a global viewpoint and citizenship in the corporate workplace. The volume throws light on the emerging concepts of building global citizens who are willing to think beyond boundaries of place, identity, and category, and to recognize all human beings as their equals while respecting humanity's inherent diversity. The effective use of cross-cultural teams can provide a source of experience and innovative thinking to enhance the competitive position of organizations. However, cultural differences can interfere with the successful completion of goals in today's multicultural global business community. To achieve project goals and avoid cultural misunderstandings, managers should be culturally sensitive and promote creativity and motivation through flexible leadership. The chapter authors in this volume look at these challenges by reviewing and conducting empirical studies, roundtables, and focus discussions. The volume tackles a variety of issues, including enterprise resource planning (ERP), talent management, differences in individual work performances, differences in leadership styles, virtual work relationships, and much more. It looks at the challenges in establishing crosscultural workplaces, such as the overcoming significant barriers in multi-cultural project communications and motivating project team members.
