The student workbook for the credentialed Heartsaver Pediatric

First Aid course. Provides information on how to manage illness

and injuries in a child during the first few minutes of an

emergency until professional help arrives. Includes four core modules: First Aid Basics, Injuries and Illnesses, Life-Threatening Emergencies and the Chain of Survival, and CPR and AED. Also includes optional modules, such as Use of a Nebulizer, to meet regulations for day-care centers in certain states. Workbook comes shrink-wrapped with the Heartsaver Pediatric First Aid Quick Reference Guide (#80-1002), the Adult CPR And AED Reminder Card, the Child And Infant CPR And AED Reminder Card, and a CD containing supplemental information and video clips on CPR and AED skills. An ideal resource for first responders, child-care workers, teachers, foster-care workers, camp counselors, youth organizations, coaches/Little League organizations, as well as parents, grandparents, and baby sitters.

This book is a comprehensive guide to emergency and trauma

care covering the complete process, from pre-hospital care, rapid

and point of care assessment, and triaging, to care of the patient

during transfer, and in-hospital care. Beginning with a general

overview of emergency care and resuscitation, the following

sections discuss the treatment of emergencies and trauma in

different systems of the body. A complete section is dedicated to

paediatric emergencies. The final chapters cover trauma

management, toxicology, disaster management, and

environmental emergencies such as thermal and chemical burns,

and snake bites. The descriptive text is further enhanced by more

than 700 flowcharts, tables, diagrams, clinical photographs, and

short notes to assist learning. Key points Comprehensive guide to

emergency and trauma care Covers management of emergencies

in different systems of the body Includes section on paediatric

emergencies Highly illustrated with flowcharts, tables, diagrams,

photographs and short notes

Now in its Second Edition with a new title, Best Practices:

Evidence-Based Nursing Procedures is an excellent compilation of

"best" practices based on current research and expert consensus

findings. This timely, authoritative reference applies research

findings directly to every aspect of nursing practice to guide

nurses in performing procedures for patients with a full range of

conditions and illnesses. This edition provides a thorough update

and review and includes new procedures and practices. Every

entry is evidence-based, identifies the sources of the evidence,

and now includes manufacturer recommendations. Nursing

diagnoses, expected outcomes, and unexpected outcomes

(complications) are now discussed for each procedure.

Best Practices

Basic Life Support (BLS) Provider Manual - The content in this

handbook is in compliance with the 2020 guidelines for CPR and

ECC (Emergency Cardiac Care), recently released by the

American Heart Association - therefore, all the protocols

illustrated in this book are based on up-to-date evidence. These guidelines are updated every 5 years. The BLS Provider Manual is a complete guide and reference tool that covers all the information students need to know in order to successfully complete the BLS course. For easier learning, multiple-choice questions can be found at the end of each chapter. The answers to these exercises are found at the very end of the book. Basic Life Support (BLS) refers to a set of procedures that can be learned to prolong survival in life-threatening situations until more professional help is available. Any individual can become certified in basic life support protocols. These protocols are frequently updated, based on the latest evidence available, and every individual who undergoes BLS certification may need to refresh their knowledge every two years. Medical professionals usually have a sound understanding of basic life support protocols. Even then, it is essential for them to frequently undergo certifications to update their knowledge regarding the latest evidence-based protocols. This handbook is designed for both medical professionals and non-healthcare individuals. It aims to establish a sound understanding of the mechanisms underlying basic life support. The intended audience is healthcare students and personnel who need to learn how to perform CPR and other basic cardiovascular life support skills in a wide variety of both clinical and prehospital settings. Advanced Cardiovascular Life Support Instructor Manual

This New American Red Cros CPR/AED for the Professional

Rescuer Participant's Manual and course reflect changes based on

the 2005 Consensus on Science for CPR and Emergency

Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid.

Changes to this program and manual include simplifications to

many of the CPR skill sequences, which helps improve retention.

There have also been changes to help improve the quality of CPR.

The integration of CPR skills into the operation of AEDs had

changed to help improve survival from sudden cardiac arrest.

Professional rescuers are now trained to use AEDs on adults and

children. Information has been updated and added to this

program to help professional rescuers administer epinephrine,

aspirin and fixed-flow-rate oxygen. The skills learned in this

course include adult, child and infant rescue breathing, conscious

and unconscious choking, CPR, two-rescuer CPR and adult and

child AED. Additional training can be added to this course

including bloodborne pathogens training and emergency oxygen

administration. While the skills and knowledge that professional

rescuers use are increasing, this training will help you meet your

most important responsibility as a professional rescuer- the

responsibility to save lives.
