Indigenous Research Methodologies McGraw-Hill Education (UK)

A phenomenal success from its first publication, this new edition of the classic Management Research continues to be the definitive word in management research methods. Integrating qualitative and quantitative methods, underpinned by an understanding of philosophy and, crucially, politics, this book succeeds in tackling complex issues in a clear and accessible way. Mark Easterby-Smith, Richard Thorpe, and Paul Jackson, three highly-experienced management researchers, give practical guidance to help students to conduct management research as well as truly understand the logic behind it.

A Socio-Legal Study of Hacking Routledge

"Dr. Lori Lambert (Mi'kmaq/Abenaki) writes about the problems of adjusting research methodologies in the behavioral sciences to Native values and tribal community life. In addition to surveying the literature with an emphasis on native authors, she has interviewed a sampling of Indigenous people in Montana's Flathead Indian Reservation; Australia; and Northern Canada. Members of four Indigenous communities speak up about what they expect from researchers who come into their communities. Their voices and stories provide a conceptual framework to western researchers who anticipate doing research with Indigenous peoples, whether it be in the social, behavioral, or environmental sciences. The conceptual framework that their stories have created gives hope and empowerment to Indigenous

communities as they endeavor to pass on their values and stories to future generations. Today Indigenous peoples are developing Indigenous Research Methodologies from stories told by elders. These methods allow researchers to respect Native communities and contribute to their healing and empowerment. Indigenous research is not a new phenomenon. People indigenous to their place have known since time immemorial how their world works. By careful observation, they have always been researchers. In countless Indigenous communities, these story keepers have preserved the knowledge of their community's past." -- Publisher's description

The best-selling Writing Analytical Assessments in Social Work guides you through the principles of good writing and methodically shows you: how to analyse how to structure the process of writing an assessment (researching, chronologising, informed data-gathering, putting it all together), and how to get this done under time constraints. The new edition goes further than just teaching writing skills by exploring the practical and psychological barriers to good practice. It also looks at how you turn good analysis into useful recommendations – making it something useful for the family - by applying the same analytical, critical thinking. Written in an accessible way and packed with examples and case studies, this book is both practically-minded and constantly returning to first principles: reminding you what it is you are trying to achieve and teaching you how to write reports that can be read by families and judges alike. A Tool Kit for Quantitative Data Analysis New Research - New Voices

This book examines how Indigenous Peoples around the world are demanding greater data sovereignty, and challenging the ways in which governments have historically used Indigenous data to develop policies and programs. In the digital age, governments are increasingly dependent on data and data analytics to inform their policies and decision-making. However, Indigenous Peoples have often been the unwilling targets of policy interventions and have had little say over the collection, use and application of data about them, their lands and cultures. At the heart of Indigenous Peoples' demands for change are the enduring aspirations of self-determination over their institutions, resources, knowledge and information systems. With contributors from Australia, Aotearoa New Zealand, North and South America and Europe, this book offers a rich account of the potential for Indigenous data sovereignty to support human flourishing and to protect against the ever-growing threats of data-related risks and harms.

When you combine the sheer scale and range of digital information now available with a journalist's "nose for news" and her ability to tell a compelling story, a new world of possibility opens up. With *The Data Journalism Handbook*, you'll explore the potential, limits, and applied uses of this new and fascinating field. This valuable handbook has attracted scores of contributors since the European Journalism Centre and the Open Knowledge Foundation launched the project at MozFest 2011. Examine the use of data journalism at the BBC, the Chicago Tribune, the Guardian, and other news organizations Explore in-depth case studies on elections, riots, school performance, and corruption Learn how to find data from the Web, through freedom of information laws, and by "crowd sourcing" Extract information from raw data with tips for working with numbers and statistics and using data visualization Deliver data through infographics, news apps, open data platforms, and download links

Indigenous Statistics Routledge

In the first book ever published on Indigenous quantitative methodologies, Maggie Walter and Chris Andersen open up a major new approach to research across the disciplines and applied fields. While qualitative methods have been rigorously critiqued and reformulated, the population statistics relied on by virtually all research on Indigenous peoples continue to be taken for granted as straightforward, transparent numbers. This book dismantles that persistent positivism with a forceful critique, then fills the void with a new paradigm for Indigenous quantitative methods, using concrete examples of research projects from First World Indigenous peoples in the United States, Australia, and Canada. Concise and accessible, it is an ideal supplementary text as well as a core component of the methodological toolkit for anyone conducting Indigenous research or using Indigenous population statistics.

Quantitative Research Methods in Communication John Wiley & Sons

Feminist Perspectives on Social Research Oxford University Press, USA

Despite a voluminous literature detailing the procedures of research ethics boards and institutional ethical review processes, there are few texts that explore the realpolitik of conducting criminal research in practice. This book explores the unique lived experiences of scholars engaging with ethics during their criminological research, and focuses on the ethical dilemmas that researchers encounter both in the field and while writing up results for publication. Who benefits from criminological research? What are the roles and impacts of ethics review boards? How do methodological and theoretical decisions factor in to questions of ethical conduct and research ethics governance? This book is divided into four parts: Part I, Institutional arrangements and positionality, explores the ongoing and expanding process of ethics protocol and procedures, principles of confidentiality, and the positionality of the researcher. Part II, Trust and research with vulnerable populations, examines the complexity of work

involving prisoners, indigenous peoples and victims of extreme violence, power dynamics between researchers and participants, and the challenges of informed consent. Part III, Research on and with police, reflects on the importance of transparent relations with police, best practices, and the consequences of undertaking research in authoritarian contexts. Part IV, Emerging areas, scrutinizes the ethics of carceral tours and suggests possible alternatives, and offers one of the first sociological and criminological examinations of dark net cryptomarkets. Drawing upon the experiences of international experts, this book aims to provoke further reflection on and discussion of ethics in practice. This book is ideal for students undertaking courses on research methods in criminology, as well as a key resource for criminology researchers around the world.

Indigenous Data Sovereignty and Policy Routledge

Following the increasing emphasis in the classroom and in the field to sensitize researchers and students to diverse epistemologies, methods, and methodologies - especially those of women, minority groups, former colonized societies, indigenous people, historically oppressed communities, and people with disabilities, author Bagele Chilisa has written the first research methods textbook that situates research in a larger, historical, cultural, and global context with case studies from around the globe to make very visible the specific methodologies that are commensurate with the transformative paradigm of research and the historical and cultural traditions of indigenous peoples.

Chapters cover the history of research methods, colonial epistemologies, research within postcolonial societies, relational epistemologies, emergent and indigenous methodologies, Afrocentric research, feminist research, language frameworks, interviewing, and building partnerships between researchers and the researched. The book comes replete with traditional textbook features such as key points, exercises, and suggested readings, which makes it ideally suited for graduate courses in research methods, especially in education, health, women's studies, cultural studies, sociology, and related social sciences.

Big Data Mining and Complexity SAGE

After decades of the American "war on drugs" and relentless prison expansion, political officials are finally challenging mass incarceration. Many point to an apparently promising solution to reduce the prison population: addiction treatment. In *Addicted to Rehab*, Bard College sociologist Allison McKim gives an in-depth and innovative ethnographic account of two such rehab programs for women, one located in the criminal justice system and one located in the private healthcare system—two very different ways of defining and treating addiction. McKim's book shows how addiction rehab reflects the race, class, and gender politics of the punitive turn. As a result, addiction has become a racialized category that has reorganized the link between punishment and welfare provision. While reformers hope that treatment will offer an alternative to punishment and help women, McKim argues that the framework of addiction further stigmatizes criminalized women and undermines our capacity to challenge gendered subordination. Her study ultimately reveals a two-tiered system, bifurcated by race and class.

Management Research Oxford University Press, USA

This textbook is an advanced introduction to quantitative methods for students in communication and allied social science disciplines that focuses on why and how to conduct research that contributes to social justice. Today's researchers are inspired by the potential for scholarship to make a difference for society, to push toward more just and equitable ends, and to engage in dialogue with members of the public so that they can make decisions about how to navigate the social, cultural, and political world equipped with accurate, fair, and up-to-date knowledge. This book illustrates the mechanics and the meaning behind quantitative research methods by illustrating each step in the research design process with research addressing questions of social justice. It provides practical guidance for researchers who wish to engage in the transformation of structures, practices, and understandings in society through community and civic engagement and policy formation. It contains step-by-step guidance in quantitative methods—from conceptualization through all the stages of execution of a study, including providing a detailed guide for statistical analysis—and demonstrates how

researchers can engage with social justice issues in systematic, rigorous, ethical, and meaningful ways. This text serves as a core

or supplementary textbook for graduate and advanced undergraduate courses in research methods for communication and social sciences and fills a gap for a methods text that is

responsive to the desire of scholars to conduct socially impactful research.
