The development of Afrikaans is investigated within its sociohistorical context from the beginnings of the Afrikaans speech community in the 17th century to the present. Language contact in the loose and heterogeneous early Cape society gave rise to a divergent variety of Dutch later to be named Afrikaans. There was extensive borrowing as well as creolisation due to the strong presence of foreigners who had to acquire Dutch rapidly and under adverse social conditions. Changes in the linguistic core and functions of Afrikaans are set forth in a number of chapters.

The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most

important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

The biological and psychological basis of pet therapy / animal-assisted therapy and what this means for practice "A comprehensive, scientific foundation for human-animal therapy." (Judith Solomon) In recent years, the ancient symbiosis between humans and their pets has entered a new phase, marked by the burgeoning clinical specialty of human-animal therapy. This approach uses the relationship between humans and their (mainly) mammalian pets to support the growth of emotion regulation, social skills, and mental health in children, adolescents, and adults. But how are humans and animals able to develop close bonds at all? What makes it possible for animals to have a therapeutic effect on humans? And how can we best use this understanding in animal-assisted therapy? In this unique book, a team of expert biologists and psychologists integrate and combine sophisticated biological and psychological knowledge to answer these questions. Together they have created a comprehensive, scientific foundation for human-animal therapy, a foundation that will facilitate the development, implementation, and evaluation of effective new interventions.
