Sustainable poverty reduction and equitable economic development depend on the solid foundation of the rule of law. These reforms are underpinned by legal reform, whether it be to increase efficiency in business transactions, benefit from globalization policies, improve the way governments deliver essential services, or facilitate access to a more efficient and effective justice system. Internationally, rules and frameworks of cooperation are required in order to confront new global threats, such as communicable diseases, attacks on the environmental commons, destabilizing capital movements, and money laundering. The World Bank Legal Review, the first in a new annual series, offers a combination of legal scholarship, lessons from experience, legal developments, and recent reports on the many ways in which the application of law and the improvement of justice systems promote poverty reduction, economic

development, and the rule of law. This book, produced by the Legal Vice Presidency of the World Bank, is a publication for policymakers and their legal advisers, attorneys and other professionals involved in the area of international development.

Every four years since 2004, the Copenhagen Consensus Center has organized and hosted a high profile thought experiment about how a hypothetical extra \$75 billion of development assistance money might best be spent to solve twelve of the major crises facing the world today. Collated in this specially commissioned book, a group of more than 50 experts make their cases for investment, discussing how to combat problems ranging from armed conflicts, corruption and trade barriers, to natural disasters, hunger, education and climate change. For each case, 'Alternative Perspectives' are also included to provide a critique and make other suggestions for investment. In addition, a panel of senior economists, including four Nobel Laureates, rank the attractiveness of each policy proposal in terms of its anticipated cost-benefit ratio. This thought-provoking book opens up debate, encouraging readers to come up with their own rankings and decide which solutions are smarter than others.

The economic futures of the United States, Canada, and Japan are tightly linked by the extremely powerful trade network these nations share. Yet because of trade and domestic policies aimed at preserving economic and, some argue, cultural integrity, there has at times been considerable friction among the three nations. Much of the recent trade animus of the U.S. has been aimed Japan, the country with the largest trade surplus with the United States. Canada, the largest trade partner of the U.S., maintains fiscal policies which resemble those of Japan, but has not been the focus of similar concern. Since the actions of each nation reverberate throughout the network, a full and accurate understanding of these complex relations will be essential if ongoing trade negotiations, policymaking, and international relations are to be constructive. The papers in this volume were developed from a conference that addressed the need to discover which structural determinants and policies shape the close economic ties among these nations. Leading experts on trade and macroeconomics from all three countries examine disproportionate saving rates, exchange rate volatility, varying industrial policies and levels of financial innovation, the effects of present tax policies and proposed reforms, and the dynamism of major Pacific nations and the leadership role Japan may play in U.S. relations with that region. Several important conclusions are reached by the contributors. They assert that Japan's trade barriers are relatively low overall and are comparable to those

maintained by the United States and Canada, and that divergent fiscal policies have been the major source of macroeconomic imbalances between the United States and other major countries in the 1980s. They also conclude that current trade imbalances may persist for some time. The analyses offered here are likely to prove influential in future policymaking and will be of interest to a wide audience, including academic economists, government officials, and students of theoretical and policy issues of international trade, investment, and finance.

The failure of the Copenhagen climate conference in December 2009 revealed major flaws in the way the world's policy makers have attempted to prevent dangerous levels of increases in global temperatures. The expert authors in this specially commissioned collection focus on the likely costs and benefits of a very wide range of policy options, including geo-engineering, mitigation of CO₂, methane and 'black carbon', expanding forest, research and development of low-carbon energy and encouraging green technology transfer. For each policy, authors outline all of the costs, benefits and likely outcomes, in fully referenced, clearly presented chapters accompanied by shorter, critical alternative perspectives. To further stimulate debate, a panel of economists, including three Nobel laureates, evaluate and rank the attractiveness of the policies. This authoritative and thought-provoking book will challenge readers to form their own conclusions about the best ways to respond to global warming.

In Finance, Investment and Macroeconomics, Myron J. Gordon advances a theory of finance and investment under uncertainty and risk aversion which resolves problems left unsolved by Keynes in a manner consistent with his work. Keynes established that both the short-run and long-run performance of a capitalist system depend upon investment, but he failed to arrive at an alternative to the neoclassical theory of investment. Professor Gordon demonstrates that the extension of neoclassical theory to deal with uncertainty and risk aversion is based upon a string of assumptions which are empirically false. The competitive stationary state, the foundation for the neoclassical theory of a capitalist system, is shown to be unfeasible because it results in a very high probability of bankruptcy at the micro level and the system's early collapse on the macro level. Capitalists seeking long term survival are shown to be subject to a growth imperative, to the pursuit of monopoly power, and to a concern

for financial policy. Later sections of the book discuss the consequences of this behaviour for short-run fluctuations and the long-run development of capitalist systems. This innovative book advances an important new theory of finance and investment which recognizes the problem of bankruptcy when the future is uncertain. It will be welcomed by both post Keynesian and neoclassical economists as a significant contribution to current economic understanding.

Long-Term Solutions for a Short-Term World demonstrates the complexity of the challenges that poor countries face and introduces the readers to the concept and impact of participatory research for development. Participatory research requires researchers to work with communities, governments, and other relevant actors to deal with common problems. Finding solutions requires participants to reflect critically on the cultural, economic, historical, political, and social contexts within which the issue under investigation exists. The book contains a collection of essays from development researchers and professionals, each of whom is an activist who has made significant contributions to the struggles of the poor in their own societies. Essays are presented as case studies and, in each, the contributor explains the specific development problem, the paths followed to solve the problem, lessons learned as a result of the research, and the development challenges on the horizon in his field of research. Together, these essays present a fascinating picture of how some of today's most pressing development issues are being dealt with through research, demonstrating how interdisciplinary and alternative approaches can be implemented in new and innovative ways.

CFA Program Curriculum 2020 Level I Volumes 1-6 Box Set Holt, Rinehart and Winston of Canada

In the last half of the 20th Century, the world economy has benefited from a globalization process driven by the enlightened confluence of technology, innovation, trade, and foreign direct investment. This book broadens our understanding of that process. Opening with a review of current global economic metrics and the significant differences between advanced and developing nations, the book goes on to discuss the globalization paradigm and the forces driving it. Discussing the importance of

new ideas and new technology in continued economic growth, the volume shows how the protection of intellectual property encourages innovation. Also covering the evolution of international trade, the book reviews trade distortions from both external and internal sources, comparing trade on a multilateral, non-discriminatory basis with alternative trade practices, such as free trade and custom unions. The work also reviews the origins and functions of the new World Trade Organization. Describing the rapidly growing practice of foreign direct investment, the book shows how FDI is closely linked to international trade and concludes with a review of the important function FDI can play in the bundling and delivery of the resources required for accelerated economic development of the emerging world.

How do we prepare for and manage the challenges and the transformations that are increasingly confronting cities? Solutions are necessary for the impacts expected from the global population movement toward urban centres; the evolution of technologies and its influence on the economy; the evolving socio-cultural fabric of our cities and what it means for citizen engagement and happiness; and for the increasing need to protect and better manage the environment. The series of essays presented here will help governments, organizations, and concerned citizens think differently about ways we can improve the places we call home. It will stimulate local stakeholders to move away from silo-thinking and work collaboratively toward innovative solutions to make cities more liveable and sustainable. The volume brings together international experts on development, innovation, education, health, digitalization, and planning to provide stimulating new ideas and successful examples of tools and systems being used worldwide to improve the future of cities.

'Triggered by the North American Free Trade Agreement (NAFTA), Canada, the United States and Mexico redefined their public policies to facilitate the regionalization of transactions. However, this volume addresses the institutional gaps that still remain focusing mainly on the cross-border governance of security aspects. It gathers interdisciplinary contributions of specialists working on continental issues within Canada, the United States and Mexico and highlights the transnational dimension of certain issues still managed under national-framed policies. Furthermore, it explores the possibilities and constraints for moving public policy into new cross-border governance strategies. Divided in three parts, the first part assesses what is at stake in cross-border governance issues and whether the integrative trend in the region will be maintained or stalled in the years to come. The second part explores the growing scope of security problems interconnected with borders, migration, energy and drug trafficking across the region. It highlights how Mexico and Canada are responding or adapting their policy choices to a continental security approach framed by the US after the terrorist attacks of September 11, and to the major concerns of the Obama administration. The third part focuses on the governance of territorial borders and bilateral affairs, i.e. Mexico-US and Canada-Mexico relations.

A positive agenda for achieving the Sustainable Development Goals by 2030. All 193 member nations of the United Nations agreed in September 2015 to adopt a set of seventeen "Sustainable Development Goals," to be achieved by 2030. Each of the goals—in such areas as education and health care—is laudable in and of itself, and governments and organizations are working hard on them. But so far there is no overall, positive agenda of what new things need to be done to ensure the goals are achieved across all nations. In a search of fresh approaches to the longstanding problems targeted by the Sustainable Development Goals, the Japan International Cooperation Agency and the Global Economy and Development program at Brookings mounted a collaborative research effort to advance implementation of Agenda 2030. This edited volume is the product of that effort. The book approaches the UN's goals

through three broad lenses. The first considers new approaches to capturing value. Examples include Nigeria's first green bonds, practical methods to expand women's economic opportunities, benchmarking to reflect business contributions to achieving the goals, new incentives for investment in infrastructure, and educational systems that promote cross-sector problem solving. The second lens entails new approaches to targeting places, including oceans, rural areas, fast-growing developing cities, and the interlocking challenge of data systems, including geospatial information generated by satellites. The third lens focuses on updating governance, broadly defined. Issues include how civil society can align with the SDG challenge; how an advanced economy like Canada can approach the goals at home and abroad; what needs to be done to foster new approaches for managing the global commons; and how can multilateral institutions for health and development finance evolve.
