This book examines the concept of legitimacy as it may be used to explain the success, or failure, of key stability operations since the end of the Cold War. In the success of stability operations, legitimacy is key. In order to achieve success, the intervening force must create a sense of legitimacy of the mission among the various constituencies concerned with and involved in the venture. These parties include the people of the host nation, the host government

(whose relations with the local people must be legitimate), political elites and the general public worldwide—including the intervening parties' own domestic constituencies, who will sustain (or not sustain) the intervention by offering (or withdrawing) support. This book seeks to bring into close scrutiny the legitimacy of stability interventions in the post-Cold War era, by proposing a concept that captures both the multi-faceted nature of legitimacy and the process of legitimation that takes place in each case. Case studies on Liberia, Bosnia, Somalia, Rwanda, Afghanistan and Iraq explain how legitimacy related to the outcome of these operations. This book will be of much interest to students of stability operations, counterinsurgency, peace operations, humanitarian intervention, and IR/security

studies in general.

Sessional Papers CRC Press

During World War II, polio epidemics in the United States were viewed as the country's "other war at home": they could be neither predicted nor contained, and paralyzed patients faced disability in a world unfriendly to the disabled. These realities were exacerbated by the medical community's enforced orthodoxy in treating the disease, treatments that generally consisted of ineffective therapies. Polio Wars is the story of Sister Elizabeth Kenny -- "Sister" being a reference to her status as a senior nurse, not a religious designation -- who arrived in the US from Australia in 1940 espousing an unorthodox approach to the treatment of polio. Kenny approached the disease as a non-neurological affliction, championing

such novel therapies as hot packs and muscle exercises in place of splinting, surgery, and immobilization. Her care embodied a different style of clinical practice, one of optimistic, patient-centered treatments that gave hope to desperate patients and families. The Kenny method, initially dismissed by the US medical establishment, gained overwhelming support over the ensuing decade, including the endorsement of the National Foundation for Infantile Paralysis (today's March of Dimes), America's largest disease philanthropy. By 1952, a Gallup Poll identified Sister Kenny as most admired woman in America, and she went on to serve as an expert witness at Congressional hearings on scientific research, a foundation director, and the subject of a Hollywood film. Kenny breached professional and social mores, crafting a public persona that blended Florence Nightingale and Marie Curie. By the 1980s, following the discovery of the Salk and Sabin vaccines and the March of Dimes' withdrawal from polio research, most Americans had forgotten polio, its therapies, and Sister Kenny. In examining this historical arc and the public's process

of forgetting, Naomi Rogers presents Kenny as someone worth remembering. *Polio Wars* recalls both the passion and the practices of clinical care and explores them in their own terms.

Landmark Cases in the Law of Restitution
by Mocktime Publication

It is now well established that the law of unjust enrichment forms an important and distinctive part of the English law of obligations. Restitutionary awards for unjust enrichment and for wrongdoing are clearly recognised for what they are. But these are recent developments. Before the

last decade of the twentieth century the very existence of a separate law of unjust enrichment was controversial, its scope and content matters of dispute. In this collection of essays, a group of leading scholars look back and reappraise some of the landmark cases in the law of restitution. They range from the early seventeenth century to the mid-twentieth century, and shed new light on some classic decisions. Some argue that the importance of their case has been overstated; others, that it has been overlooked, or misconceived. All persuasively invite the reader to think again about some well-known authorities. The book is an essential resource for anyone, scholar, student or practitioner, with an interest in this fascinating area of the law.

National Protection for National Citizens,
1873 to 1880 is the third of six planned
volumes of The Selected Papers of
Elizabeth Cady Stanton and Susan B.
Anthony. The entire collection documents
the friendship and accomplishments of two
of America's most important social and
political reformers. Though neither Stanton
nor Anthony lived to see passage of the
Nineteenth Amendment in 1920, each of
them devoted fifty-five years to the cause
of woman suffrage. The third volume of
the Selected Papers of Elizabeth Cady
Stanton and Susan B. Anthony opens while
woman suffragists await the decision of
the U.S. Supreme Court in cases testing
whether the Constitution recognized
women as voters within the terms of the
Fourteenth and Fifteenth Amendments. At

its close they are pursuing their own
amendment to the Constitution and
pressing the presidential candidates of
1880 to speak in its favor. Through their
letters, speeches, articles, and diaries, the
volume recounts the national careers of
Elizabeth Cady Stanton and Susan B.
Anthony as popular lecturers, their work
with members of Congress to expand
women's rights, their protests during the
Centennial Year of 1876, and the launch
that same year of their campaign for a
Sixteenth Amendment.

Present Your Research to the World! The
World Congress 2009 on Medical Physics
and Biomedical Engineering – the triennial
scientific meeting of the IUPESM - is the
world's leading forum for presenting the
results of current scientific work in health-
related physics and technologies to an
international audience. With more than
2,800 presentations it will be the biggest
conference in the fields of Medical Physics
and Biomedical Engineering in 2009!

Medical physics, biomedical engineering
and bioengineering have been driving
forces of innovation and progress in
medicine and healthcare over the past two
decades. As new key technologies arise
with significant potential to open new
options in diagnostics and therapeutics, it
is a multidisciplinary task to evaluate their
benefit for medicine and healthcare with
respect to the quality of performance and
therapeutic output. Covering key aspects
such as information and communication
technologies, micro- and nanosystems,
optics and biotechnology, the congress will
serve as an inter- and multidisciplinary
platform that brings together people from
basic research, R&D, industry and medical
application to discuss these issues. As a
major event for science, medicine and
technology the congress provides a
comprehensive overview and in-depth,
first-hand information on new
developments, advanced technologies and
current and future applications. With this
Final Program we would like to give you an
overview of the dimension of the congress
and invite you to join us in Munich! Olaf
Dössel Congress President Wolfgang C.

During the crucial period of 1917-1918, the United States superseded Great Britain as the premier power in the world. The differing strategic perspectives of London and Washington were central to the tensions and misunderstandings that separated the two dominant powers in 1918 and determined how these two countries would interact following the Armistice. David R. Woodward traces the projection of American military power to western Europe and analyzes in depth the strategic goals of the American political and military leadership in this first comprehensive study of Anglo-American relations in the land war in Europe. Based on extensive research in British and American archives, the study focuses on Woodrow Wilson and David Lloyd George, whose relationship was poisoned by the mutual suspicion and hostility generated by their disagreements over strategy and military policy. President Wilson sought to use his country's military effort in western Europe as a tool to gain acceptance for his "new diplomacy." The British, anxious over the Turko-German threat to Asia and their worsening manpower situation, sought to utilize American military intervention for

their own political/military purposes. Woodward's use of unpublished sources provides new perspectives on war leadership, and his analysis of the British-American interaction serves as a case study of the inevitable tension between national self-interest and efforts at collective security, even among nations that share many cultural and political values. For historians and anyone interested in military history and World War I, *Trial by Friendship* fills a gap in the study of Anglo-American relations by providing a strong, well-written study on an area of American history that has received scant attention from scholars. [Proceedings of the 10th Electrical Insulation Conference, September 20-23, 1971](#) Cambridge University Press
The tragic death of 13-year-old Danny Croteau in 1972 faded from headlines and memories for 20 years until the Boston abuse scandal—a string of assaults within the Catholic Church—exploded in the early 2000s. Despite numerous indications, including 40 claims of sexual misconduct with minors, pointing to him as Croteau's killer, the Reverend Richard R. Lavigne remains "innocent." Drawing on more than

10,000 pages of police and court records and interviews with Danny's friends and family, fellow abuse victims, and church officials, the author uncovers the truth—church complicity in a cover up and the masking of priests' involvement in a ring of abusive clergy—behind Croteau's death and those who had a hand in it.

The Unsolved Murder of Danny Croteau and the Culture of Abuse in the Catholic Church Elsevier Inc.

International Conference on Environmental Sensing and Assessment, September 14-19, 1975, Las Vegas, Nevada

Bloomsbury Publishing

Advances in Engineering Materials,

Structures and Systems: Innovations,

Mechanics and Applications comprises 411 papers that were presented at SEMC 2019, the Seventh International Conference on Structural Engineering, Mechanics and Computation, held in Cape Town, South Africa, from 2 to 4 September 2019. The subject matter reflects the broad scope of SEMC conferences, and covers a wide variety of engineering materials (both traditional and innovative) and many types of structures. The many topics featured in these Proceedings can be classified into six broad categories that deal with: (i) the mechanics of materials and fluids (elasticity, plasticity, flow through porous media, fluid dynamics, fracture, fatigue, damage, delamination, corrosion, bond, creep, shrinkage, etc); (ii) the mechanics of structures and systems (structural dynamics, vibration, seismic response, soil-structure interaction, fluid-structure interaction, response to blast and impact, response to fire, structural stability, buckling, collapse behaviour); (iii) the numerical modelling and experimental testing of materials and structures (numerical methods, simulation techniques, multi-scale modelling, computational modelling, laboratory

testing, field testing, experimental measurements); (iv) innovations and special structures (nanostructures, adaptive structures, smart structures, composite structures, bio-inspired structures, shell structures, membranes, space structures, lightweight structures, long-span structures, tall buildings, wind turbines, etc); (v) design in traditional engineering materials (steel, concrete, steel-concrete composite, aluminium, masonry, timber, glass); (vi) the process of structural engineering (conceptualisation, planning, analysis, design, optimization, construction, assembly, manufacture, testing, maintenance, monitoring, assessment, repair, strengthening, retrofitting, decommissioning). The SEMC 2019 Proceedings will be of interest to civil, structural, mechanical, marine and aerospace engineers. Researchers, developers, practitioners and academics in these disciplines will find them useful. Two versions of the papers are available. Short versions, intended to be concise but self-contained summaries of the full papers, are in this printed book. The full versions of the papers are in the e-book. [Systems Conference, September 22-24, 1988, Davis, California](#) Rutgers University Press

Although Ulysses S. Grant is best remembered as Civil War commander and as president, documents included here demonstrate his importance in the intervening years. Grant interpreted Reconstruction as the means to preserve battlefield victories. He avoided taking a public stand in the bitter dispute between President Andrew Johnson and Congress because he believed that military men served the country, not partisan interests. Nevertheless, he recognized that presidential Reconstruction had failed and privately supported passage of the First Reconstruction Act. Grant's public silence on political issues led to lively newspaper speculation, and individuals from unreconstructed rebels to ardent Unionists wrote to him offering support and advice. Circumstances were forcing him inexorably onto the political battlefield. [Legitimacy and the Use of Armed Force](#) Vintage

From new research and equipment to new procedures, applications, and approaches, the field of interventional cardiology is one

of the fastest-changing areas in medicine. Increasing data and recent technological advances have resulted in exciting changes – and an even greater need for cutting-edge, authoritative guidance on current practice. Textbook of Interventional Cardiology, 8th Edition, covers the theories, trends, and applications of diagnostic and interventional cardiology that cardiologists, cardiac surgeons, vascular surgeons, referring physicians, and advanced practitioners need to know. Focuses on the latest treatment protocols for managing patients at every level of complexity. Includes all-new chapters on Coronary Stenting, Diagnosis and Treatment of Coronary Microvascular Disease, Percutaneous Transcatheter Valve in Valve Implantation, and Percutaneous Tricuspid Valve Repair. Features hundreds of new illustrations, tables, and boxes for visual clarity and quick reference. Offers expanded coverage of transcatheter aortic valve interventions with extensive updates on practice implications. Discusses hot topics such new atherectomy devices, percutaneous mitral valve replacement,

and percutaneous treatment of paravalvular leak. Provides the unique insights of expert leaders in the field who have pioneered today’s innovative devices and techniques and lend their own analysis of practical, evidence-based clinical applications. Presents the most recent data on how genomics and genetics impact interventional cardiology. Provides an in-depth understanding of cardiology, making it well suited for cardiology and interventional cardiology exam preparation.

A Chronology to Assist in the Analysis of American Public Opinion Torkel Opsahl Academic EPublisher

In this chapter, the fundamentals of surfactant flooding are covered, which include microemulsion properties, phase behavior, interfacial tension, capillary desaturation, surfactant adsorption and retention, and relative permeabilities. The surfactant-polymer interactions are discussed. The mechanisms and screening criteria are briefly discussed. The field cases presented include low-tension waterflooding (Loma Novia, Wichita County Regular field), sequential micellar/polymer flooding (El Dorado,

Sloss), micellar/polymer flooding (Torchlight and Delaware-Childers), and Minas SP project preparation and SP flooding (Gudong).
