 Thirty-four-year-old Judy Taylor relished her simple, happy life. She had a loving husband, three young daughters, and a beautiful home. But after intestinal blood clots

annihilated her digestive system, Judy was left with the certainty of starving to death in a cold Toronto hospital. The year was 1970, and most doctors still considered long-term intravenous feeding to be science fiction. As a last resort, Judy's surgeons turned to a radical young immigrant doctor who had performed groundbreaking research on artificial feeding

methods for humans. Together, Judy and Dr. Khursheed Jeejeebhoy agreed that Judy's only hope was to become a human test subject. For the next twenty years, Judy and Dr. "Jeej" worked to develop and hone the medical procedures for Total Parenteral Nutrition (TPN), which became the basis for modern intravenous feeding. With courage and determination, Judy raised

her family and led a fulfilling life despite being the subject of experimental medicine. Lifeliner tells her inspiring true story and intimately reveals the miraculous link between science and the resilience of the human spirit.

Due to the rise in petroleum prices as well as increasing environmental concerns, there is a need to develop biochemicals and bioproducts that offer

realistic alternatives to their traditional counterparts; this book will address the lack of a centralized resource of information on lubricants and greases from renewable sources, and will be useful to a wide audience in industry and academia. It is based on 20 years of research and development at the UNI-NABL Center, and discusses the various types of vegetable oils available, comparing

their characteristics, properties and benefits against those of typical petroleum oils as well as discussing common evaluation tests and giving examples and case studies of successful applications of biobased lubricants and greases. Whilst scientific and engineering research data is included, the book is written in an accessible manner and is illustrated throughout. Focuses on an

<p>industrial application of lubrication technology undergoing current explosive growth in the global market. Includes a detailed review of the material benefits of plant-based lubricants that include a better viscosity index and lubricity even at extreme temperatures, lower flammability due to higher flash points and lower pour points. Covers the basic chemistry of</p>	<p>vegetable oils as well as their profiles for use in lubricants and greases and environmental benefits. Includes examples and case studies of where vegetable-based lubricants have been successfully employed in industry applications. <i>UX Design for Mobile</i> Penerbit Andi Goose has gone on holiday and Duck is looking after her pond.
