Maintenance Manual For Dummies*
Depending on what part of the country
that you reside in, gas-burning heating
systems can be either an absolute
necessity or a rarity. For those that
maintain, service and install gas heating
systems or those just looking for a more
in-depth source of accurate information,
this modular training program focuses on
furnaces and boilers that burn natural gas
or LP. The combustion of gas to generate
heat can be dangerous and should be
thoroughly understood by HVAC
technicians. This program covers many
facets of gas heating including:
combustion, system components and
controls, heating sequences, installation,

and troubleshooting. Through
advancements in technology, modern
heating systems have become far more
efficient than their predecessors.
Integrated circuit boards and electronic
ignition systems have replaced the
mechanical controls and manually lit pilots
of older systems. Today, technicians may
encounter furnaces or boilers that are
older than they are, complex high-efficient
systems, or anything in between. It is
critical that they have a working
knowledge of all these systems. This
manual provides students and practicing
technicians with the information and
knowledge necessary to safely work on
systems that incorporate gas combustion
to provide heat. The information to
service, maintain, and install these
systems is also presented in an easy-to-
understand format. The manual is full of
color images and diagrams and includes
end-of-chapter worksheets. Gas Heating
was written to be a primary text that
focuses specifically on gas-burning heating
systems which can be used as a stand-
alone text or a supplement to your current
text book.

The Third Edition of ANSI/ACCA Manual D
is the Air Conditioning Contractorsof
America procedure for sizing residential
duct systems. This procedureuses Manual J
(ANSI/ACCA, Eighth Edition) heating and
cooling loads todetermine space air
delivery requirements. This procedure
matches duct system resistance (pressure
drop) to blower performance (as defined
by manufacture's blower performance
tables). This assures that appropriate

airflow is delivered toall rooms and
spaces; and that system airflow is
compatible with the operatingrange of
primary equipment. The capabilities and
sensitivities of this procedureare
compatible with single-zone systems, and
multi-zone (air zoned) systems. The
primary equipment can have a multi-
speed blower (PSC motor), or avariable-
speed blower (ECM or constant torque
motor), or a true variable speed
motor).Edition Three, Version 2.50 of
Manual D (D3) specifically
identifiesnormative requirements, and
specifically identifies related informative
material.
