Difference in West Africa Harvard  
University Press

Why do we do the things we do? Over a decade in the making, this game-changing book is Robert Sapolsky's genre-shattering attempt to answer that question as fully as perhaps only he could, looking at it from every angle. Sapolsky's storytelling concept is delightful but it also has a powerful intrinsic logic: he starts by looking at the factors that bear on a person's reaction in the precise moment a behavior occurs, and then hops back in time from there, in stages, ultimately ending up at the deep history of our species and its genetic inheritance. And so the first category of explanation is the neurobiological one. What goes on in a person's brain a second before the behavior happens? Then he pulls out to a slightly larger field of vision, a little earlier in time: What sight, sound, or

smell triggers the nervous system to produce that behavior? And then, what hormones act hours to days earlier to change how responsive that individual is to the stimuli which trigger the nervous system? By now, he has increased our field of vision so that we are thinking about neurobiology and the sensory world of our environment and endocrinology in trying to explain what happened. Sapolsky keeps going--next to what features of the environment affected that person's brain, and then back to the childhood of the individual, and then to their genetic makeup. Finally, he expands the view to encompass factors larger than that one individual. How culture has shaped that individual's group, what ecological factors helped shape that culture, and on and on, back to evolutionary factors thousands and even millions of years old. The result is one of the most dazzling tours de horizon of the science of human behavior ever attempted, a majestic synthesis that harvests cutting-edge research across a range of disciplines to provide a subtle and

nuanced perspective on why we ultimately do the things we do...for good and for ill. Sapolsky builds on this understanding to wrestle with some of our deepest and thorniest questions relating to tribalism and xenophobia, hierarchy and competition, morality and free will, and war and peace. Wise, humane, often very funny, *Behave* is a towering achievement, powerfully humanizing, and downright heroic in its own right.

*A Workbook and Laboratory Manual for Introductory Courses* Cram101

"Exploring Biological Anthropology, 2/e," is a core concepts version of the successful text, "Biological Anthropology, 2/e." It provides students with a strong foundation in biological anthropology without some of the extended examples found in the original text. "Exploring Biological Anthropology, 2/e," offers concise coverage of core material, while maintaining thorough coverage of traditionally important topics.

There's a silent epidemic in western civilization, and it is right under our noses. Our jaws are getting smaller and our teeth crooked and crowded, creating not only aesthetic challenges but also difficulties with breathing. Modern orthodontics has persuaded us that braces and oral devices can correct these problems. While teeth can certainly be straightened, what about the underlying causes of this rapid shift in oral evolution and the health risks posed by obstructed airways? Sandra Kahn and Paul R. Ehrlich, a pioneering orthodontist and a world-renowned evolutionist, respectively, present the biological, dietary, and cultural changes that have driven us toward this major health challenge. They propose simple adjustments that can alleviate this developing crisis, as well as a major alternative to orthodontics that promises more significant long-term relief. Jaws will change your life. Every parent should read this book.

*Biological Anthropology* Princeton University Press

What makes humans unique? What makes us the most successful animal species inhabiting the Earth today? Most scientists agree that the key to our success is the unusually large size of our brains. Our large brains gave us our exceptional thinking capacity and led to humans' other distinctive characteristics, including advanced communication, tool use, and walking on two legs. Or was it the other way around? Did the challenges faced by early humans push the species toward communication, tool use, and walking and, in doing so, drive the evolutionary engine toward a large brain? In this provocative new book, Craig Stanford presents an intriguing

alternative to this puzzling question--an alternative grounded in recent, groundbreaking scientific observation. According to Stanford, what made humans unique was meat. Or, rather, the desire for meat, the eating of meat, the hunting of meat, and the sharing of meat. Based on new insights into the behavior of chimps and other great apes, our now extinct human ancestors, and existing hunting and gathering societies, Stanford shows the remarkable role that meat has played in these societies. Perhaps because it provides a highly concentrated source of protein--essential for the development and health of the brain--meat is craved by many primates, including humans. This craving has given meat genuine power--the power to cause males to form hunting parties and organize entire cultures around hunting. And it has given men the power to manipulate and control women in these cultures. Stanford argues that the skills developed and required for successful hunting and especially the sharing of meat spurred the explosion of human brain size over the past 200,000 years. He then turns his attention to the ways meat is shared within primate and human societies to argue that this all-important activity has had profound effects on basic social structures that are still felt today. Sure to spark a lively debate, Stanford's argument takes the form of an extended essay on human origins. The book's small format, helpful illustrations, and moderate tone will appeal to all readers interested in those fundamental questions about what makes us human.

**The Essentials by Craig Stanford,**

For courses in Biological Anthropology  
Present a concise overview of biological anthropology, from early foundations to

recent innovations Exploring Biological Anthropology: The Essentials combines concise coverage of the foundations of the field with modern innovations and discoveries, helping students understand, and get excited about, the discipline. Because the authors conduct research in three of the main areas of biological anthropology--the human fossil record (Susan Antón), primate behavior and ecology (Craig Stanford), and human biology and the brain (John Allen)--they offer a specialist approach that engages students and gives them everything they need to master the subject. The Fourth Edition continues to present traditional physical anthropology within a modern Darwinian framework, and includes coverage of contemporary discoveries to highlight the ever-increasing body of knowledge in biological anthropology. Also available with MyAnthroLab® MyAnthroLab for the Biological Anthropology course extends learning online to engage students and improve results. Media resources with assignments bring concepts to life, and offer students opportunities to practice applying what they've learned. Please note: this version of MyAnthroLab does not include an eText. Exploring Biological Anthropology: The Essentials, Fourth Edition is also available via REVEL™, an interactive learning environment that enables students to read, practice, and study in one continuous experience. Note: You are purchasing a standalone product; MyLab™ & Mastering™ does not come packaged with this content. Students, if interested in purchasing this title with MyLab & Mastering, ask your instructor for the correct package ISBN and Course ID. Instructors, contact your Pearson representative for more information. If you would like to purchase both the physical text and

*Planet Without Apes* Pearson

As anthropologists, we offer this book about aging in a wide variety of human societies in the hope of its making three contributions. First, this book will help to remedy a massive neglect of old age by the discipline of anthropology. The pioneering work of Leo Simmons (1945) has remained a lonely monument since the 1940's, for despite recent interest in the subject of aging in modern Western societies on the part of social gerontologists and sociologists, little has been done by anthropologists on aging in non-Western societies. Where it has been treated at all, it has been in the form either of a few final paragraphs in the discussion of the life cycle or of a simple ethnographic fact among other facts about a certain social system. What has been missing has been any attempt to put aging in a cross-cultural or comparative perspective, to give this vital subject the same treatment that has been accorded marriage, for example, or death or inheritance or sex roles. Second, this book will bring a needed cross-cultural perspective to the study of social gerontology. The recent explosion of interest in this field has been largely confined to the study of aging in North America and Europe. But we anthropologists feel that such a culturally limited study, though interesting and productive in its own

right, is dangerously narrow if it does not consider what aging is like in other societies. What aspects of aging, for example, are human universals and have to be planned for as inevitable, and what aspects are cultural particulars and can be avoided, modified, or strengthened under certain social conditions? By presenting both a biological account of the universals of human aging (Weiss), and specific ethnographic accounts of aging in a wide variety of societies, we believe we can help to put North American aging into perspective. Third, we hope this book will serve as an illustration of a particular anthropological approach to unity and diversity in human societies and cultures. Perhaps the main task of sociocultural anthropology is a twofold one: the explanation of cross-cultural universals, somehow rooted either in the biological nature of the human species or in universal imperatives of social organization, and the explanation of intercultural variations, rooted in a dialectical interaction between culture and the material conditions (partially created by culture) in which it exists. If unity and diversity can indeed be explained in this way, the cross-cultural study of aging can serve as a paradigm. By first setting out what seem to be the universals determined by the biology of the human species, and by then exploring the range of variation in cultural solutions, we ought to be able to formulate a set of principles that will allow us to explain why variations occur in a certain way. Nine ethnographic case studies are enough, we believe, to enable us to formulate some preliminary hypotheses about the nature and causes of variation in the social process of aging.

**Society of Others** Prentice Hall

Tortoises may be the first family of higher animals to become extinct in the coming decades. They are losing the survival race because of what distinguishes them, in particular their slow, steady pace of life and reproduction. The Last Tortoise offers an introduction to these remarkable animals and the extraordinary adaptations that have allowed them to successfully populate a diverse range of habitats—from deserts to islands to tropical forests. The shields that protect their shoulders and ribs have helped them evade predators. They are also safeguarded by their extreme longevity and long period of fertility. Craig Stanford details how human predation has overcome these evolutionary advantages, extinguishing several species and threatening the remaining forty-five. At the center of this beautifully written work is Stanford's own research in the Mascarene and Galapagos Islands, where the plight of giant tortoise populations illustrates the threat faced by all tortoises. He addresses unique survival problems, from genetic issues to the costs and benefits of different reproductive strategies. Though the picture Stanford draws is bleak, he offers reason for hope in the face of seemingly inevitable tragedy. Like many intractable environmental problems, extinction is not manifest destiny. Focusing on tortoise nurseries and breeding facilities, the substitution of proxy species for extinct tortoises, and the introduction of species to new environments, Stanford's work makes a persuasive case for the future of the tortoise in all its rich diversity.

### **Exploring Medical Anthropology**

Academic Internet Pub Incorporated  
Present a concise overview of biological

anthropology, from early foundations to recent innovations Revel(TM) for Exploring Biological Anthropology: The Essentials combines concise coverage of the foundations of the field with modern innovations and discoveries, helping students understand, and get excited about, the discipline. Because the authors conduct research in three of the main areas of biological anthropology - the human fossil record (Susan Antón), primate behavior and ecology (Craig Stanford), and human biology and the brain (John Allen) - they offer a specialist approach that engages students and gives them everything they need to master the subject. Revel for the Fourth Edition continues to present traditional physical anthropology within a modern Darwinian framework, and includes coverage of contemporary discoveries to highlight the ever-increasing body of knowledge in biological anthropology. Revel is Pearson's newest way of delivering our respected content. Fully digital and highly engaging, Revel replaces the textbook and gives students everything they need for the course. Informed by extensive research on how people read, think, and learn, Revel is an interactive learning environment that enables students to read, practice, and study in one continuous experience - for less than the cost of a traditional textbook. NOTE: This Revel Combo Access pack includes a Revel access code plus a loose-leaf print reference (delivered by mail) to complement your Revel experience. In addition to this access code, you will need a course invite link, provided by your instructor, to register for and use Revel.

### **Method and Practice in Biological Anthropology** W. W. Norton

"Discover the best of biological anthropology: From its earliest

foundations to its most current innovations." Over the past 40 years, the study of biological anthropology has rapidly evolved from focusing on just physical anthropology to including the study of the fossil record and the human skeleton, genetics of individuals and populations, our primate relatives, human adaptation, and human behavior. The 3rd edition of "Exploring Biological Anthropology" combines the most up-to-date, comprehensive coverage of the foundations of the field with modern innovations and discoveries. A better teaching and learning experience This program will provide a better teaching and learning experience-for you and your students. Here's how: "Personalize Learning" -- The new MyAnthroLab delivers proven results in helping students succeed, provides engaging experiences that personalize learning, and comes from a trusted partner with educational expertise and a deep commitment to helping students and instructors achieve their goals. "Improve Critical Thinking "- This text provides students with the best possible art, photos, and maps for every topic covered in the book, helping them gain a better understanding of key material. "Engage Students "-- "Insights and Advances" boxes and "Innovations" features help students develop an appreciation for the excitement of discovery. "Support Instructors --" MyAnthroLab, an author-reviewed Instructor's Manual, Electronic "MyTest" Test Bank, PowerPoint Presentation Slides, and Pearson Custom course material are available to be packaged with this text. Additionally, we offer package options for the lab portion of your course with "Method & Practice in Biological Anthropology: A Workbook and Laboratory Manual for Introductory Courses," or "Atlas of Anthropology."

Note: MyAnthroLab does not come automatically packaged with this text. To purchase MyAnthroLab, please visit: [www.myanthrolab.com](http://www.myanthrolab.com).

Univ of California Press

Now in its fourth edition, Exploring Medical Anthropology provides a concise and engaging introduction to medical anthropology. It presents competing theoretical perspectives in a balanced fashion, highlighting points of conflict and convergence. Concrete examples and the author's personal research experiences are utilized to explain some of the discipline's most important insights, such as that biology and culture matter equally in the human experience of disease and that medical anthropology can help to alleviate human suffering. The text has been thoroughly updated for the fourth edition, including fresh case studies and a new chapter on drugs. It contains a range of pedagogical features to support teaching and learning, including images, text boxes, a glossary, and suggested further reading.

**An Introduction to Native North America -- Pearson eText** Penguin

Recent discoveries about wild chimpanzees have dramatically reshaped our understanding of these great apes and their kinship with humans. We now know that chimpanzees not only have genomes similar to our own but also plot political coups, wage wars over territory, pass on cultural traditions to younger generations, and ruthlessly strategize for resources, including sexual partners. In *The New Chimpanzee*, Craig Stanford challenges us to let apes guide our inquiry into what it means to be human. With wit and lucidity, Stanford explains what the past two decades of chimpanzee field research has taught us about the origins of human social behavior, the nature of aggression and communication, and the divergence of humans and apes from a common ancestor. Drawing on his extensive observations of chimpanzee behavior and social dynamics, Stanford adds to our knowledge of chimpanzees' political intelligence, sexual power plays, violent ambition, cultural diversity, and adaptability. *The New Chimpanzee*

portrays a complex and even more humanlike ape than the one Jane Goodall popularized more than a half century ago. It also sounds an urgent call for the protection of our nearest relatives at a moment when their survival is at risk.

*Studyguide for Exploring Biological Anthropology* Stanford University Press  
*An Introduction to Native North America* provides a basic introduction to the native peoples of North America, including both the United States and Canada. It covers the history of research, basic prehistory, the European invasion and the impact of Europeans on Native cultures. Additionally, much of the book is written from the perspective of the ethnographic present, and the various cultures are described as they were at the specific times noted in the text.

Teaching and Learning Experiences:  
 Improve Critical Thinking - *An Introduction to Native North America* provides internet resources for students to supplement reading material, and contains an extensive bibliography to aid in their research.  
 Engage Students - *An Introduction to Native North America* highlights important individuals in "VIP Profile" mini-biographies, and contains "Sidelights" throughout the text which provides short explanations of interesting aspects of native culture.  
 Support Instructors - Teaching your course just got easier! You can create a Customized Text or use our Instructor's Manual, Electronic "MyTest" Test Bank or PowerPoint Presentation Slides. Plus, *An Introduction to Native North America's* organization was designed to be used in conjunction with the *Handbook of North American Indians*, published by the Smithsonian Institution.

A valuable resource for you Biological

Anthropology lab Method and Practice in Biological Anthropology: A Workbook and Laboratory Manual for Introductory Courses complements a wide variety of introductory level laboratory courses in biological anthropology. It easily functions with a well-equipped laboratory, or it may be used as a primary source of photos and/or exercises, providing optimum flexibility to suit most laboratory environments. The book is organized into four sections, to reflect the organization of the typical introductory biological anthropology course: genetics and evolution, the human skeleton, non human primates, and our fossil ancestors. MySearchLab is a part of the Hens program. Research and writing tools, including access to academic journals, help students explore biological anthropology in even greater depth. To provide students with flexibility, students can download the eText to a tablet using the free Pearson eText app. NOTE: MySearchLab does not come automatically packaged with this text. *Exploring Biological Anthropology the Essentials, Books a la Carte Edition*  
Morton Publishing Company

"In this timely commentary on the ideas of difference, strangeness, and Western contact, Stasch weaves ethnographic

materials together with theoretical framing in an exceptionally clear and compelling way. A highly original, important and, in fact, astonishing piece of scholarship."--Bambi Schieffelin, author of *The Give and Take of Everyday Life* "In this remarkable ethnography, Rupert Stasch takes us to the lowlands of West Papua and into the lives of people who have built a social world out of their relationships with strange and potentially dangerous others. The Korowai are classic inhabitants of the "savage slot," still dogged by their designation as Stone Age primitives. Instead of flipping the script and arguing that the Korowai are just like everyone else, Stasch draws far-reaching lessons from the particularities of Korowai life. Stasch writes with grace and clarity on the ambivalent ways in which the Korowai confront, evade, and embrace an otherness that resides not just in words, food, places, and human bodies, but also in the pasts and futures brought to mind by these material signs. Analyzing Korowai sign use as a concrete, historical process, he charts the passage between intimacy and alterity that Korowai undergo in their encounters not only with spirits and Indonesian soldiers, but also with children, husbands, and wives. Some of what Stasch describes may seem strange and even disturbing. But in pondering Stasch's findings, one gradually comes to see the making of persons and relationships in an entirely new light. Gone is the old debate between biological determination and cultural freedom; in its place is an approach that affirms the multiple histories that converge in and flow from a life. Erudite, empathetic, and unremittingly smart, *Society of Others* recasts the very meaning of kinship--and

makes a case for the power of what anthropologists do."--Danilyn Rutherford,

author of *Raiding the Land of the Foreigners: The Limits of the Nation on an Indonesian Frontier*
