Insights and Inspiration from Teachers across America ASCD

Teaching and Learning at a Distance is written for introductory distance education courses for preservice or in-service teachers, and for training programs that discuss teaching distant learners or managing distance education systems. This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs. The teacher or trainer who uses this book will be able to distinguish between appropriate uses of distance education. In this text we take the following themes: The first theme is the definition of distance education. Before we started writing the first edition of Teaching and Learning at a Distance we carefully reviewed the literature to determine the definition that would be at the foundation of our writing. This definition

is based on the work of Desmond Keegan, but is unique to this book. This definition of distance education has been adopted by the Association for Educational Communications and Technology and by the Encyclopedia Britannica. The second theme of the book was the importance of research to the development of the contents of the book. The best practices presented in Teaching and Learning at a Distance are validated by scientific evidence. Certainly there are “rules of thumb”, but we have always attempted to only include recommendations that can be supported by research. The third theme of Teaching and Learning at a Distance is derived from Richard Clark’s famous quote published in the Review of Educational Research that states that media are mere vehicles that do not directly influence achievement. Clark’s controversial work is discussed in the book, but is also fundamental to the book’s advocacy for distance education – in other words, we authors did not make the claim that education delivered at a distance was inherently better than other ways people learn. Distance delivered instruction is not a “magical” approach that makes learners achieve more. The fourth theme of the book is equivalency theory. Here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment. Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom. The final theme for Teaching and Learning at a Distance is the idea that the book should be comprehensive – that it should cover as much of the

various ways instruction is made available to distant learners as is possible. It should be a single source of information about the field.

The New York Times best-selling book exploring the counterproductive reactions white people have when their assumptions about race are challenged, and how these reactions maintain racial inequality. In this “vital, necessary, and beautiful book” (Michael Eric Dyson), antiracist educator Robin DiAngelo deftly illuminates the phenomenon of white fragility and “allows us to understand racism as a practice not restricted to ‘bad people’ (Claudia Rankine). Referring to the defensive moves that white people make when challenged racially, white fragility is characterized by emotions such as anger, fear, and guilt, and by behaviors including argumentation and silence. These behaviors, in turn, function to reinstate white racial equilibrium and prevent any meaningful cross-racial dialogue. In this in-depth exploration, DiAngelo examines how white fragility develops, how it protects racial inequality, and what we can do to engage more constructively.

[What School Could Be](#) John Wiley & Sons Feeling overwhelmed—constantly, on a daily basis—has unfortunately become the status quo among educators. But it doesn't have to be. Schools need to stop adding more programs, strategies, activities, resources, projects, assessments, and meetings. Though

they are often implemented with the best intentions, these things ultimately end up as clutter—that which inhibits our ability to help students learn. Instead, teachers need more clarity, which emerges when we prioritize our efforts to do less with greater focus. This isn't simply a matter of teachers doing less. Rather, teachers need to be intentional and prioritize their efforts to develop deeper understanding among students. In *Teaching with Clarity*, Tony Frontier focuses on three fundamental questions to help reduce curricular and organizational clutter in the interest of clarity and focus: * What does it mean to understand? * What is most important to understand? * How do we prioritize our strategic effort to help students understand what is most important? By prioritizing clear success criteria, intentional design, meaningful feedback, and a shared purpose, teachers can begin to clear away the curricular clutter that overwhelms the profession—and embrace the clarity that emerges.

Foundations of Distance Education 7th Edition American Society for Training and Development

It has long been known that carefully constructed programs delivered through the media, such as radio, television and, more recently, Internet can have a profound effect on social development and behavior. There is, however, increasing acknowledgment that media programming alone is not enough to sustain beneficial behavior change.

There is a clear need for these Entertainment-Education programs to be reinforced by strong on-the-ground support from trained community workers. In remote areas of developing countries, this support must often be given through distance education. This book, which is the third in the series

titled *Communication for Behavior Change*, provides guidelines on the preparation of distance education radio, TV and Internet programs, using the Edu-tainment format. This method of teaching provides clear, concise instruction set against an entertainment background that can attract and hold the attention of learners who frequently have no contact with a teacher or mentor. In this book, the author—a leading practitioner in the fields of both Edu-tainment and Entertainment-Education (the format used for general public programming)—provides detailed instructions on creating distance education programs for community workers in developing countries. A special section, provided by a specialist in the field of Internet use, gives clear guidelines on IT application for distance education. The book is designed to help project managers, writers, producers, researchers, development planners, donors, NGOs and other organizations who want to make use of distance education programming for community workers. It provides clear guidelines on curriculum preparation, media selection, program format choice, script writing and review, program production, preparation of support books and participant guides and methods of audience feedback. The 6Ts of successful lesson preparation are explained along with demonstrations of how the 6Ts are used in various script samples.
