We all know individuals who, though seemingly naïve about the shrewd ways of the world, ascend to the top of their professions and find peace and satisfaction in their personal lives. Admiring even envying such people, we wonder what makes their lives work. Can it be that they are tapped into an unseen power that guides them from within? *Conquering the Mouth of the Dragon* is an adventurous novel, teeming with suspense, mystery, and intrigue. Based on actual events, the characters are drawn from real people who lived through situations much like those described in the book. Constance McKenna, a feng shui designer for a major corporation in San Francisco, travels to China to attend a seminar. Her odyssey begins the moment she leaves her house on her way to the airport; mysterious and frightening events follow at a rapid pace. Her faith in herself and her belief in the powers that guide her life are tested again and again as she travels through unfamiliar places. The cast of characters in *Conquering the Mouth of the Dragon* is as cryptic as the circumstances surrounding Constance's journey. None is more baffling than Lang DeBjon, for whom Constance alternately feels suspicion and attraction. Readers even those unfamiliar with metaphysics will easily identify with the feelings of fear and determination interspersed with hopelessness. It is a story of triumph over adversity, a story of success.

Surface Mount Technology has had a profound influence on the electronics industry, and has led to the use of new materials, techniques and manufacturing processes. Since the first edition of this book was written, electronic assemblies have continued to become still smaller and more complex, while soldering still remains the dominant connecting technique. This is a comprehensive guide to current methods of soldering components to their substrates, written by one of the founding fathers of the technology. It also covers component placement, the post-CFC technology of cleaning after soldering, and the principles and methods of quality control and rework. New sections deal with Ball-Grid-Array (BGA) technology, lead-free solders, no-clean fluxes, and the current standard specifications for solders and fluxes. Dr Rudolf Strauss has spent most of his working life with a leading manufacturer of solders and fluxes. He was responsible for a number of innovations including the concept of wave soldering, and for many years has been active as lecturer, consultant, and technical author. His book explains the principles of soldering and surface mount technology in practical terms and plain language, free from jargon. It is addressed to the man, or woman, who has to do the job, but it will also be of help in planning manufacturing strategy and in making purchasing decisions relating to consumables and equipment. Written by founding father of SMT technology Standard specifications have been fully updated New chapter covering Ball Grid Array (BGA) technology Pan Macmillan

Plot your way to emotional health and happiness OUP Oxford This book presents an introduction to the design and manufacture of fibre-reinforced composites. The mechanical properties of unidirectional composites are considered in a structural design context. The use of woven and random fibres is also addressed. The accuracy of design estimates for unidirectional composites is benchmarked against test data, and the relevance of a factor of safety (FoS) is established. The importance of prototype testing is emphasised. This book illustrates how to make a fibre-reinforced composite. Wet layup, vacuum bagging and prepreg moulding are covered in detail. Some guidance on mould design and construction is also provided. Finally, an introduction to the manufacture of composite tubes is presented. Wherever possible, design and make examples are used to illustrate the content. Tutorial questions and problems are included at the end of each chapter. The reader is encouraged to use these questions and problems to assess their own level of understanding of the content.

What if your customers had a vested interest in guiding your company toward greater success? What if your employees had a personal as well as professional commitment to elevating your organization? Imagine how different your results would be if investors, vendors, and even analysts treasured the relationship they have built with you? Most important . . . is your company capable of setting aside a bit of its own self-interest to become part of dramatically more rewarding collaborative effort? That's the provocative and ultimately earthshaking question David Nour poses. He argues that co-creation is a transformational journey that naturally leads to growth and evolution . . . because it gives birth to shared interests that dwarf anything that existed previously. In Co-Create, David Nour makes the case that co-creation leads to Market Gravity™, a force that attracts stakeholders to your business because they recognize that many others have also united their interests with yours. It's the sense—backed by tangible metrics—that this is bigger than any of

us imagined . . . except that you imagined precisely such an outcome. That's the power of co-creation.
