Autodesk Revit 2017 for Architecture

Ascent, Center for Technical Knowledge
 Instant Revit!: A Quick and Easy Guide to Learning Autodesk(R) Revit(R) 2021 This book is designed to give the student a basic introduction to the Revit 2021 computer aided design (CAD) program. The book contains step-by-step project tutorials with screenshots using the Revit program. The units for the projects are in Imperial (Feet & Inches) units. The student begins with three warm-up projects designed to familiarize them with the Revit interface. These projects will use the 2D portion of the program that will guide the student through a drawing of a one-view drawing of a geometrical component, a lighting plan with two alternate plans, and a two-view drawing of a single story house. Once the student completes these projects, they will begin the main project. The project is a two-story residential structure. A three-dimensional model of the project will be developed and used to create views of the: first and second floor plans, section views, interior and exterior elevations, and detail views of the structure. Some of these drawings will be annotated with dimensions and notes. Door, window, and room finish schedules will be also be created. Once these drawings are completed, the student will then create design options of the structure. This allows the design to be presented with multiple styles or options within the same file. There is also a companion website for the book that is maintained by the author. Purchasers of the book will be able to download files that are used in the tutorials. Revit families are presented as part of the project. Families are groups of elements that may be added to the project such as: furniture, cabinetry, appliances, lighting, people, countertops, and other elements. The student will utilize these files to add various elements to their project. Family files are also provided from manufacturer's sites and the companion website. Students will then be guided through the process of creating perspective views and renderings of the project. Instruction includes use of the Autodesk Rendering site to process renderings within their cloud. Cloud

rendering utilizes an Autodesk server for processing instead of the student's own computer. This allows for renderings to be created at a much faster rate. At the end of the project, the student has the option of creating a PDF portfolio of the project. This uses an additional, free program to assemble the files. Emphasis is placed on making the learning process as quick and as easy as possible. This way the student may concentrate on completing the project and becoming a productive Revit drafter and designer in a relatively short time.

The Autodesk(R) Revit(R) software is a powerful Building Information Modeling (BIM) program that works the way architects think. The program streamlines the design process through the use of a central 3D model, where changes made in one view update across all views and on the printable sheets. This training guide is designed to teach you the Autodesk Revit functionality as you would work with it throughout the design process. You begin by learning about the user interface and basic drawing, editing, and viewing tools. Then you learn design development tools including how to model walls, doors, windows, floors, ceilings, stairs and more. Finally, you learn the processes that take the model into the construction documentation phase. Since building projects themselves tend to be extremely complex, the Autodesk Revit software is also complex. The objective of the Autodesk Revit 2015 (R1): Architecture Fundamentals training guide is to enable students to create full 3D architectural project models and set them up in working drawings. This training guide focuses on basic tools that the majority of students need to work with the Autodesk Revit software. Topics Covered: Understand the purpose of Building Information Management (BIM) and how it is applied in the Autodesk Revit software. Navigating the Autodesk Revit workspace and interface. Working with the basic drawing and editing tools. Creating Levels and Grids as datum elements for the model. Creating a 3D building model with walls, curtain walls, windows, and doors. Adding floors, ceilings, and roofs to the building model. Creating component-based and custom stairs. Adding component features, such as furniture and equipment. Setting up sheets for plotting with text, dimensions, details, tags, and schedules. Creating details. Prerequisites: An understanding of architectural terminology is an asset.
