Mathematics for the International Student

What is missing in most curricula - from elementary school all the way through to university education - is coursework focused on the development of problem-solving skills. Most students never learn how to think about solving problems. Besides being a lot of fun, a puzzle-based learning approach also does a remarkable job of convincing students that (a) science is useful and interesting, (b) the basic courses they take are relevant, (c) mathematics

is not that scary (no need to hate it!), and (d) it is worthwhile to stay in school, get a degree, and move into the real world which is loaded with interesting problems (problems perceived as real-world puzzles).

Mathematics for the International Student 10E (MYP 5 Extended)

MYP 5 (Extended) has been designed and written for the IB Middle Years Program (MYP) Mathematics framework. The textbook covers the Extended content outlined in the framework and includes some extension topics. This book may also be used as a general textbook at about 10th Grade (or Year 10) level in classes where students complete a rigorous course in preparation for the study of mathematics at a high level in their final two years of high school. Students who are preparing for Further Mathematics HL at IB Diploma level are encouraged to complete Chapters 27 and 28. The textbook and interactive software provide an engaging and structured package, allowing students to explore and develop their confidence in mathematics. Each chapter begins with an Opening Problem, offering

an insight into the application of the mathematics that will be studied in the chapter. Important information and key notes are highlighted, while worked examples provide step-by-step instructions with concise and relevant explanations. Discussions, Activities, Investigations, Puzzles, and Research exercises are used throughout the chapters to develop understanding, problem solving, and reasoning, within an interactive environment. The book contains many problems to cater for a range of student abilities and interests, and every effort has been made to contextualise problems so that students can see the practical applications of

the mathematics they are studying.

Thinking Skills, second edition, is the only endorsed book offering complete coverage of the Cambridge International AS and A Level syllabus.

Mathematics for the International Student

The book is an introductory textbook mainly for students of computer science and mathematics. Our guiding phrase is "what every theoretical computer scientist should know about linear programming". A major focus is on applications of linear programming, both in practice and in theory. The book is concise, but at the same time, the main results are covered

with complete proofs and in sufficient detail, ready for presentation in class. The book does not require more prerequisites than basic linear algebra, which is summarized in an appendix. One of its main goals is to help the reader to see linear programming "behind the scenes".
