England transcendentalist Henry David  
Thoreau's 1843 essay "A Winter Walk" is

a loving celebration of winter and walking. We are delighted to publish this classic book as part of our extensive Classic Library collection. After 20 years in America, a successful businessman returns to the rustic Piedmontese communities which were riven by fascism. Much has changed since the war, and still more would like to be forgotten and buried. Memories return to the narrator as he looks at the

lives and sometimes violent fates of the villagers he has known since childhood, and rediscovers the poverty, ignorance, or indifference that binds them to the hills and valleys against the beauty of the landscape and the rhythm of the seasons. With simple poetic force, Pavese weaves separate strands of narrative together, bringing them to a stark and poignant climax. This textbook provides a sound foundation in physical optics by covering key concepts in a rigorous but accessible manner. Propagation of electromagnetic waves is examined from multiple perspectives, with explanation of which viewpoints and methods are best suited to different situations. After an introduction to the theory of electromagnetism, reflection, refraction, and dispersion, topics such as

geometrical optics, interference, diffraction, coherence, laser beams, polarization, crystallography, and anisotropy are closely examined. Optical elements, including lenses, mirrors, prisms, classical and Fabry-Perot interferometers, resonant cavities, multilayer dielectric structures, interference and spatial filters, diffraction gratings, polarizers, and

birefringent plates, are treated in depth. The coverage also encompasses such seldom-covered topics as modeling of general astigmatism via 4x4 matrices, FFT-based numerical methods, and bianisotropy, with a relativistic treatment of optical activity and the Faraday and Fresnel-Fizeau effects. Finally, the history of optics is discussed.
