The theory on minimax approximation presented in this thesis applies not only to minimax approximation by polynomials of some fixed degree, but is more general and considers approximation by generalized polynomials. A generalized polynomial p is a function of the form $p(x) = \sum_{i=1}^n c_i g_i(x)$; where c_1, \dots, c_n are scalars and g_1, \dots, g_n are functions. FUNCTION APPROXIMATION AND THE REMEZ ALGORITHM

Minimax approximation algorithm (or L^∞ approximation or uniform approximation) is a method to find an approximation of a mathematical function that minimizes maximum error. For example, given a function f defined on the interval $[a, b]$ and a degree bound n . Minimax approximation algorithm - Wikipedia
