This volume of the Collections of the Minnesota Historical Society is devoted to a historical discussion by Jacob Vredenberg Brower (1844-1905) about the source and headwaters of the Mississippi River, combined with his extensive hydrographic and topographic surveys. Brower summarizes the major European and white American exploratory trips to the area. Based on a scientific survey of the Itasca Basin that he made under the authority of the Minnesota Historical Society, Brower concludes that the true source of the Mississippi is neither Itasca Lake nor Elk Lake, nor even the stream discovered by Jean N. Nicolet (1836) called "Nicolet's Infant Mississippi River," but the "Greater Ultimate Reservoir" which receives its water supply from aerial precipitation and stores it in various component lakes and springs. Some of these lakes include Hernando de Soto, the Triplets, Whipple, Morrison, and Floating Moss; the streams that proceed from them

include the beginnings of the Nicolet as well as the Mississippi. From Nicolet's middle lake the main river proceeds "in an unbroken channel" to the Gulf. After lobbying successfully to have this headwater region preserved as Itasca State Park (1891), Brower served as its first commissioner. The appendix includes an historical account of how the Mississippi and the Lake of the Woods came to form part of the northwestern boundary of the United States. Its author was Albert James Hill (1823-1895), who was also instrumental in the creation of Brower's report.

Brief Presented by the Government of the United States of Mexico to the Agent of the Government of the United States of America in Accordance with Art. V of the Arbitration Convention in Regard to the Chamizal Case, Dated June the 24th, 1910 Cambridge University Press

In this true story of adventure, author Jack Nisbet re-creates the life and times of David Thompson-fur trader, explorer, surveyor, and mapmaker. From 1784 to 1812, Thompson explored western North America and was the first to chart the entire length of the Columbia River. His field journals provide the earliest written accounts of the natural history and indigenous cultures of the region, and Nisbet uses them to guide his own discovery of the Northwest Territory some two centuries later. Book jacket.

River Dynamics Cambridge University Press

In the artificial landscape that is contemporary Los Angeles, Gumprecht

observes, perhaps nothing symbolizes the role of human beings in changing the face of the earth more than the exploitation and transformation of the Los Angeles River. Modified beyond recognition, its flow tapped before it even reached the surface, the river was used, abused, and forgotten. In recent years, however, there has been a growing interest in revitalizing its course - part of an expanding worldwide movement to revive urban rivers. The new attention that is being paid to the river highlights the need for a more complete telling of its history. The Los Angeles River offers the first comprehensive account of a river that helped give birth to one of the world's great cities, significantly shaped its development, and promises to play a key role in its future.

Locks and Dam No.26 Replacement, Second Lock, Mississippi River Near Alton IL (IL,MO) Doubleday

Winner of an Outstanding Academic Title Award from CHOICE Magazine Encyclopedia of Environmental Management gives a comprehensive overview of environmental problems, their sources, their assessment, and their solutions. Through in-depth entries and a topical table of contents, readers will quickly find answers to questions about specific pollution and management issues. Edited by the esteemed Sven Erik Jørgensen and an advisory board of renowned specialists, this four-volume set shares insights from more than 500 contributors—all experts in their fields. The encyclopedia provides basic knowledge for an integrated and ecologically sound management system. Nearly 400 alphabetical entries cover everything from air, soil, and water pollution to agriculture, energy, global pollution, toxic substances, and general pollution problems. Using a topical table of contents, readers can also search for entries according to the type of problem and the methodology. This allows readers to see the overall picture at a glance and find answers to the core questions: What is the pollution problem, and what are its sources? What is the "big picture," or what background knowledge do we need? How can we diagnose the problem, both qualitatively and quantitatively, using monitoring and ecological models, indicators, and services? How can we solve the problem with environmental technology, ecotechnology, cleaner technology, and environmental legislation? How do we address the problem as part of an integrated management strategy? This accessible encyclopedia examines the entire spectrum of tools available for

environmental management. An indispensable resource, it guides environmental managers to find the best possible solutions to the myriad pollution problems they face. Also Available Online This Taylor & Francis encyclopedia is also available through online subscription, offering a variety of extra benefits for researchers, students, and librarians, including: Citation tracking and alerts Active reference linking Saved searches and marked lists HTML and PDF format options Contact us to inquire about subscription options and print/online combination packages. Narrative of an expedition to the source of St. Peter's river ... &c., performed in ... 1823 by Mocktime Publication

NEW YORK TIMES BESTSELLER • The harrowing story of one of the great feats of exploration of all time and its complicated legacy—from the New York Times bestselling author of *The River of Doubt and Destiny of the Republic* For millennia the location of the Nile River's headwaters was shrouded in mystery. In the 19th century, there was a frenzy of interest in ancient Egypt. At the same time, European powers sent off waves of explorations intended to map the unknown corners of the globe - and extend their colonial empires. Richard Burton and John Hanning Speke were sent by the Royal Geographical Society to claim the prize for England. Burton spoke twenty-nine languages, and was a decorated soldier. He was also mercurial, subtle, and an iconoclastic atheist. Speke was a young aristocrat and Army officer determined to make his mark, passionate about hunting, Burton's opposite in temperament and beliefs. From the start the two men clashed. They would endure tremendous hardships, illness, and constant setbacks. Two years in, deep in the African interior, Burton became too sick to press on, but Speke did, and claimed he found the source in a great lake that he christened Lake Victoria. When they returned to England, Speke rushed to take credit, disparaging Burton. Burton disputed his claim, and Speke launched another expedition to Africa to prove it. The two became venomous enemies, with the public siding with the more charismatic Burton, to Speke's great envy. The day before they were to publicly debate, Speke shot himself. Yet there was a third man on both expeditions, his name obscured by imperial annals, whose exploits were even

more extraordinary. This was Sidi Mubarak Bombay, who was enslaved and shipped from his home village in East Africa to India. When the man who purchased him died, he made his way into the local Sultan's army, and eventually traveled back to Africa, where he used his resourcefulness, linguistic prowess and raw courage to forge a living as a guide. Without Bombay and men like him, who led, carried, and protected the expedition, neither Englishman would have come close to the headwaters of the Nile, or perhaps even survived. In *River of the Gods* Candice Millard has written another peerless story of courage and adventure, set against the backdrop of the race to exploit Africa by the colonial powers. The Hudson River from Ocean to Source "Publications":1909/10,p. 35.

Travels of the Source of the Missouri River and Across the American Continent to the Pacific Ocean

In this true story of adventure, author Jack Nisbet re-creates the life and times of David Thompson—fur trader, explorer, surveyor, and mapmaker. From 1784 to 1812, Thompson explored western North America, and his field journals provide the earliest written accounts of the natural history and indigenous cultures of the what is now British Columbia, Alberta, Montana, Idaho, Washington, and Oregon. Thompson was the first person to chart the entire route of the Columbia river, and his wilderness expeditions have become the stuff of legend. Jack Nisbet tracks the explorer across the continent, interweaving his own observations with Thompson's historical writings. The result is a fascinating story of two men discovering the Northwest territory almost two hundred years apart.

Narrative of an Expedition to the Source of St. Peter's River, Lake Winnepeek, Lake of the Woods, & C., Performed in the Year 1823

Rivers are important agents of change that shape the Earth's surface and evolve through time in response to fluctuations in climate and other environmental conditions. They are fundamental in landscape development, and essential for water supply, irrigation, and transportation. This book provides a comprehensive overview of the geomorphological processes that shape rivers and that produce change in the form of rivers. It explores how the dynamics of rivers are being affected by anthropogenic change, including climate change, dam construction, and modification of rivers for flood control and land drainage. It discusses how concern about environmental degradation of rivers has

led to the emergence of management strategies to restore and naturalize these systems, and how river management techniques work best when coordinated with the natural dynamics of rivers. This textbook provides an excellent resource for students, researchers, and professionals in fluvial geomorphology, hydrology, river science, and

environmental policy.
