Microeconomics for MBAs Routledge
For one semester MBA Managerial Economics courses Economics for Managers presents the fundamental ideas of microeconomics and macroeconomics and integrates them from a managerial decision-making perspective in a framework that can be used in a single-semester course. To be competitive in today's business environment, managers must understand how economic forces affect their business and the factors that must be considered when making business decisions. This is the only book that provides business students and MBAs with a thorough and applied understanding of both micro- and macroeconomic concepts in a way non-economics majors can understand. The third edition retains all the same core concepts and straightforward material on micro- and macroeconomics while incorporating new case material and

real-world examples that relate to today's managerial student.

An Introduction, Third Edition MIT Press

Intended primarily for Managerial Economics courses, this text also provides practical content to current and aspiring industry professionals. Economics is a powerful tool that can help managers to manage effectively. In Managerial Economics Jeffrey Perloff and James Brander use real-world issues and examples from actual markets to show future managers how economic principles can be used in business decisions. In text examples and boxed mini-cases use actual data to illustrate how to use basic models. For example, to illustrate rivalry in oligopolistic markets, the authors look at rivalry between United and American Airlines and between Coke and Pepsi. Mini-case examples include why American Apparel is vertically integrated and why upscale manufacturers limit the number of designer hand-bags a customer is allowed to buy. To help future managers learn to solve new problems, Perloff and Brander repeatedly demonstrate

problem-solving through in-text Q&As. Each Q&A poses an important managerial or economic issue and demonstrates how to solve it using a step-by-step approach. Neoclassical, Keynesian, and Marxian McGraw-Hill Europe

The second edition of an innovative undergraduate textbook in Comparative Economic Systems that goes beyond the traditional dichotomies. This second edition of an innovative undergraduate text offers an approach to understanding different economic systems that reflects both recent transformations in the world economy and recent changes in the field of Comparative Economic Systems. The traditional way of teaching comparative economics, with its reliance on relatively simple dichotomies (private vs. state, planning vs. market) does not take into consideration the many variants and mixtures of economic systems that exist in the real world. The Rossers' introduction in the first edition of the concept of the "new traditional economy"—the effort by a developing country to embed a modern economic system into a traditional culture, usually religious—presented a new way to look at developing economies. Their innovative examination of Iran and its effort to develop a "revolutionary Islamic economy" as an alternative to market capitalism illustrates the use of this new tool in comparative economics. After a four-chapter theoretical and historical overview, the book focuses on fifteen country studies, organized by economic system. The chapters on advanced market capitalism examine the economies of the United States (a chapter new to this edition) Japan, France, Sweden, and Germany. The chapters examining transition in former socialist economies discuss Russia, the former Soviet Republics, Poland, Hungary, Yugoslavia (including expanded treatment of the most successful transition economy, that of Slovenia), and China. The chapters in the

final section of the book discuss "alternative paths" taken by the developing economies of Iran, India (its complex mix of socialism, capitalism, and tradition is examined in a chapter new to this edition), Mexico, and South and North Korea. The book concludes with a look at future trends that will continue to transform the world economy.

An Introduction for the General Reader McGraw-Hill Education

A systematic comparison of the three major economic theories, showing how they differ and why these differences matter in shaping economic theory and practice. *Contending Economic Theories* offers a unique comparative treatment of the three main theories in economics as it is taught today: neoclassical, Keynesian, and Marxian. Each is developed and discussed in its own chapter, yet also differentiated from and compared to the other two theories. The authors identify each theory's starting point, its goals and foci, and its internal

logic. They connect their comparative theory analysis to the larger policy issues that divide the rival camps of theorists around such central issues as the role government should play in the economy and the class structure of production, stressing the different analytical, policy, and social decisions that flow from each theory's conceptualization of economics. The authors, building on their earlier book *Economics: Marxian versus Neoclassical*, offer an expanded treatment of Keynesian economics and a comprehensive introduction to Marxian economics, including its class analysis of society. Beyond providing a systematic explanation of the logic and structure of standard neoclassical theory, they analyze recent extensions and developments of that theory around such topics as market imperfections, information economics, new theories of equilibrium, and behavioral economics, considering whether these advances represent new paradigms or merely adjustments to the standard theory. They also explain why economic reasoning has varied among these three approaches throughout the twentieth century, and why this variation continues today—as neoclassical views give way to new Keynesian approaches in the wake of the economic collapse of 2008.
