The legendary Bruce Lee was one of the most influential martial artists of the 20th Century. But Lee's physical abilities were only the tip of the iceberg. Besides being one of the world's top martial artists and cinematic superstar, Bruce Lee was also a philosopher and one of the original champions of

self-help and human achievement. As Lee evolved his revolutionary, "non-restrictive" approach to martial art training and combat, he simultaneously evolved a unique, non-restrictive philosophy toward life and living. Built around the same fundamental principles he applied to his martial art, the central theme of this philosophy is "personal liberation" -- liberation of body, mind, and spirit through greater self-knowledge. Here, for the first time, are the fundamental tenets of Lee's philosophy of self-actualization and personal liberation taken out of the martial arts arena and put into the arena of daily

living. A ground-breaking guide, LIBERATE YOURSELF doesn't offer you a set, rigid, one-size-fits-all philosophy, but rather a fluid set of operating principles you can use to cultivate a flexible, highly adaptable attitude toward living life to its fullest, develop the skills and confidence required to free yourself from the chains of limitation, whether of physical or psychological origin, and raise your living to the level of an art form. LIBERATE YOURSELF can help you: - Become more at ease with yourself and the world around you - Take charge of your attitude and fully realize your innate

potential in all aspects of your life - Adapt to and deal effectively with whatever situation you find yourself in - Break down barriers and overcome obstacles that keep you from achieving your goals and enjoying success

Eastern Philosophy: The Basics Routledge

Trying to grasp the teachings of Wu Hsin is like trying to grasp the wind in the palm of your

hand. While they are as refreshing and fragrant as a fresh breeze, they can also be as devastating as a wildfire. Wu Hsin doesn't provide answers to the questions of life because life is its own answer. It is what-is. It moves, it flows, it breathes itself into and through everything.

Instead, the writings of Wu Hsin expose, without compromise, the fundamental misconception that there is something called an individual that needs to find something else outside of itself.

Admittedly, the sense of being a separate individual feels very real and affects every part of that apparent experience. Wu Hsin makes it abundantly clear; however, that this is a state of contracted energy, a sense of having lost something unnameable.

The Philosopher's Toolkit Taylor & Francis
Eastern Philosophy: The Basics is an essential introduction to major Indian and Chinese philosophies, both past and present. Exploring familiar metaphysical and ethical questions from the perspectives of different Eastern philosophies, including Confucianism, Daoism, and strands of Buddhism and Hinduism, this book covers key figures, issues, methods and concepts. Questions discussed include: What is

the 'self'? Is human nature inherently good or bad? How is the mind related to the world? How can you live an authentic life? What is the fundamental nature of reality? Throughout the book the relationships between Eastern Philosophy, Western Philosophy and the questions reflective people ask within the contemporary world are brought to the fore. With timelines highlighting key figures and their contributions, a list of useful websites and further reading suggestions for each topic, this engaging overview of fundamental ideas in Eastern Philosophy is valuable reading for all students of philosophy and religion, especially those seeking to understand Eastern perspectives.

Critical Thinking: The Basics On the origin of Mind

The book "Intellectual Religion" consists of potential revolutionaries ideas: like why calling us

Hindu is as wrong as calling us Indian. Why religions should be regarded merely as deceptions and Cultures only as traps. The concept of Secularism is proved irrational. Why "KaamSutra" is not a taboo. The chapters of "Discovery of Soul," "Art of Death" and "Art of Life" will demystify the riddle of Hinduism. Why "Morality is Satanic" and the characteristics of true Freedom are discussed. Further, "Caste System" is dealt in details. The last chapter "Manage Yourself" will let the readers relate to Discipline, self-development, yoga, meditation and improving oneself. The chapters like "Advice to Religions" and also, "Advice to Democracies" will challenge the threat of multi-dogmatic-religious society.

LOGIC: THE ESSENTIALS concentrates on the fundamentals of introductory logic.

Practical in orientation and content, Essentials is loaded with class-tested, proven practice exercises. The book is tailored to address the needs of many of today's

instructors who are challenged by time constraints but yet want to instill in their students a solid grasp of basic logical principles and the requisite skill to apply them in everyday life. This new text is based on the classic and bestselling textbook, *A Concise Introduction to Logic*, and nearly all of the exercises in the correlative chapters, so central to the effectiveness of that text, have been retained to ensure more than enough practice for students to master the central concepts. The text focuses largely on deductive logic, but it contains sufficient treatment of induction to provide a solid footing for informal fallacies. The result is a contemporary approach--more focused, more practical, less theoretical--built on a tradition of precise, elegant, and clear presentation of the subject matter of logic, both formal and informal. "The future is dualist" is the message of this book.

It argues that the future progress of humanity depends on the dualist viewpoint being adopted that takes account of both sides of an argument and corrects imbalances created by the application of extreme points of view. Dualist theory concerns dualist or one-to-one interactions and how these can explain many phenomena in nature and in our society that are inadequately accounted for by the sciences. The theory is applicable to every aspect of our existence and is all-embracing in the sense of giving us an additional way of looking at everything around us. It is a new and different way of viewing the phenomena already explicated by the sciences in their various ways. Dualist theory concerns the way that dualist interactions can be used to explain change, complexity and innovation in the universe, including how these interactions give us an insight into ourselves and our society. A dualist interaction is a one-to-one relationship between existents which is harmonious over a period of time and which leads to differences being created. These differences are caused by the

respective interactions. Perhaps the most obvious example is a male-female relationship in which offspring are produced. Dualist theory also addresses many of the flaws in human thinking that are currently causing problems throughout the world. It promises a better future if these flaws are overcome in the manner suggested in this book. The point is to show how reason can solve our problems. Our reasoning powers are not to be disparaged just because past ways of thinking are now failing us. We have the brains to solve our most pressing problems in the long term. It is a matter of improving our ways of thinking and this has always been the aim of philosophy, though it has lately been remiss in that regard. We must not allow past and present failures to make us despair of our future and resort to religion as the only way forward. The later Roman Empire took that path and it crippled civilisation by terminating intellectual progress. It took centuries to repair the damage caused, and even yet we are ignorant of much of the history, literature and achievements of the Roman Empire because so

much was lost through religious bigotry. As things stand, an extreme religious mentality could easily prevail and make it a crime to be doubtful and uncertain of orthodox beliefs.

Basic Philosophical Writings Routledge

The second edition of this popular compendium provides the necessary intellectual equipment to engage with and participate in effective philosophical argument, reading, and reflection. Features significantly revised, updated and expanded entries, and an entirely new section drawn from methods in the history of philosophy. This edition has a broad, pluralistic approach--appealing to readers in both continental philosophy and the history of philosophy, as well as analytic philosophy. Explains difficult concepts in an easily accessible manner, and addresses the use and application of these concepts. Proven useful to philosophy students at both beginning and advanced levels.

The Everything Philosophy Book Penguin

An excerpt from the beginning of the CHAP. I - WHAT PHILOSOPHY IS: A Preliminary Definition. - Speaking in general terms, we may say that philosophy is a persistent attempt to understand the world in which we live and of which we are a part. This preliminary definition stresses the broadness of aim characteristic of philosophy. It is an effort of the intellect of man to answer fundamental problems and gain a comprehensive view of the universe. The conception of the exact nature of philosophy has varied from period to period as man's view of the world and of his place in it has changed. Hence the history of philosophy has usually been the best index of those gradual alterations in the dominant interpretation of man and reality in which science and religion find their focus. Plato believed that a supersensible realm of ideas existed apart from the world of perceptual appearance, and his philosophy was at once a cause and an effect of this outlook. It explained what reality

was and how the human mind obtained valid glimpses of it. During the Middle Ages, man was prone to consider earthly things the creation of a supernatural deity, and his philosophy was simply the earnest search for a systematic and consistent answer to such riddles as forced themselves upon his attention. . In the eighteenth century, men were convinced that there was an external physical world and that their knowledge of it was contingent upon the sensations produced in their minds by the stimulation of their sense-organs. Certain general problems immediately resulted, and philosophy was the persistent reflection upon these general problems. Thus philosophy has always been rejection upon basic problems such as the nature of reality, the distinction between the apparent and the real, the conditions of human knowledge. It has always been the conviction of the philosopher that these questions are unavoidable and that they can be solved only by intensive reflection. A definite part of our task in the present introduction will be to explain the specific nature and inevitableness of

these problems with which the philosophers of all ages have busied themselves. Only in proportion as a concrete understanding of philosophical problems grows upon the student will he really understand what the veritable function of philosophy is. The Attitude of the Philosopher. - The attitude and ideals of the philosopher are essentially the same as those of the scientist. Both have the same mental curiosity and keen desire for valid knowledge, the same willingness to bend theories into line with experience, the same faith in methodical analysis and persistent investigation and reflection. Were we defining philosophy by reference to the trained mental attitude and intellectual habits demanded, we should identify it with science. In this sense it is a science. Probably the philosopher ought to emphasize this aspect of his subject in this day in which so many people know something of the spirit of science. The philosopher at his best is inspired with the same disinterested zeal to solve intellectual problems as is the specialist in some

branch of theoretical science. In this age of early instruction in the special sciences, the student who finally comes to philosophy with mixed feelings of hope and doubt has already some acquaintance with the lives of such men as Newton, Galileo and Darwin. He knows and admires in them their whole-hearted endeavors to solve problems in the domain of nature. It is this spirit, as much as what they have accomplished in the solution of specific problems, which attracts the generous minded. We can, therefore, best convey to the beginner a true idea of the philosopher by saying that he has the outlook of the scientist. Both concern themselves with knowledge and both seek it openly and in disregard of consequences. The philosopher is not a mystic nor the champion of some esoteric cult; he is a scientist.

Conscious Life Energy is the substance of the world and the Absolute is the source of the substance. The unity prior to duality, yet immanent in it, is the shapeless root. It is That which does not

depend on Consciousness, yet makes Consciousness possible. It is That wherein and whereof every 'I' appears and disappears. It is inconceivable for whoever attempts to conceive it. It is so clear that it is hard to see. Everything is this One displaying Itself in the multiplicity, this dance of interdependent counterparts, of presumed separate subjective self, presumed separate world, and presumed separate God. Phenomenal absence is 'I'. Everything is 'I-as'.
