The author compiles valuable lessons learned from his work with hundreds of suppliers and customers world-wide. The design of electronics is fundamental to quality and reliability; manufacturing must follow rules regarding what to and what not to do to make defect-free products; transportation, storage and warehousing operations must adhere to certain disciplines; installation should be done correctly to avoid premature degradation; and failed products must be repaired carefully to avoid damage. The new, updated Global Standard for Storage and Distribution Issue 2 will replace Storage and Distribution Issue 1 for all audits from March 2011. The Standard provides certification for the section of the supply chain between BRC Standards for the manufacture of food, packaging and consumer products and the end user of these products, the retailer/food service company. Aimed at companies involved in the storage and distribution of goods, the new Standard represents a substantial upgrade to Issue 1 and builds upon experience, with a new lay out, simpler presentation and clearer explanation of requirements. The Standard is designed to ensure best practice in the handling, storage and distribution of products and to promote continuous improvement in operating practices. The updated Standard includes the audit requirements, scheme rules and background to the Standard and provides the basis for an accredited certification of sites storing and/or distributing food, packaging and consumer products. It also enables certification of sites that wholesale products or carry out a range of contracted services.
