The Earth receives 174 Petawatts (PW) of incoming solar radiation at the upper atmosphere. Approximately 30 % of its radiation is reflected back to space while the rest of 71 % (124 PW) is absorbed by clouds, oceans and land masses. The world cumulative solar PV installed capacity reached almost 398 Gigawatts (GW) in 2018. This is only about 0.3 % of solar energy utilization from the sun. There is a wide gap of utilization is noticed due to lack of technology. In 1931 selenium cell efficiency of 1% invented then in 1980 thin films cell efficiency of 6-7% introduced. After 2013, efficiency of 18 to 21% achieved by crystalline silicon technology. In India, the installed capacity of till 2018 is of 350 GW which includes renewable and non-renewable energy sources. In that the cumulative installed solar capacity is only about 25 GW. By 2022, India wants to install 175 Gigawatt (GW) of renewable power capacity which corresponds to around half of its total electricity production. To achieve this capacity by improving solar cell efficiency from 20 % to 40 %, augmentation of grid infrastructure, massive subsidies and skilled manpower of 3 lakhs persons for the next three years to achieve the planned target. Most of the world's population lives in areas with solar insolation levels of 150 to 300 watts/m<sup>2</sup> or 3.5 to 7.0 kWh/m<sup>2</sup> per day. In India, the per capita electricity consumption from 2017 to 2018 was around 1150 to 2000 kWh. The electricity demand in the country will grow at 7 % between FY 2017 and FY 2022 and 57 % of the total electricity capacity will be generated from renewable sources by 2027 as per Central Electricity Authority (CEA). In 2011, a report by the International Energy Agency (IEA) found that solar energy technologies such as photovoltaic, solar hot water and concentrated solar power could provide a third of the world's energy by 2060.

This best-seller can help anyone whose role is to try to find specific causes for failures. It provides detailed steps for solving problems, focusing more heavily on the analytical process involved in finding the actual causes of problems. It does this using figures, diagrams, and tools useful for helping to make our thinking visible. This increases our ability to see what is truly significant and to better identify errors in our thinking. In the sections on finding root causes, this second edition now includes: more examples on the use of multi-vari charts; how thought experiments can help guide data interpretation; how to enhance the value of the data collection process; cautions for analyzing data; and what to do if one can't find the causes. In its guidance on solution identification, biomimicry and TRIZ have been added as potential solution identification techniques. In addition, the appendices have been revised to include: an expanded breakdown of the 7 M's, which includes more than 50 specific possible causes; forms for tracking causes and solutions, which can help maintain alignment of actions; techniques for how to enhance the interview process; and example responses to problem situations that the reader can analyze for appropriateness.

*Sustainable Management of Wastes Through Co-processing* S. Chand Publishing

This book is the first comprehensive book in the world on co-processing of wastes as Alternative Fuels and Raw materials (AFRs) in cement kilns. It discusses how AFR from wastes can play an important role in contributing toward reducing the use of fossil fuel and costs while conserving natural resources, lowering global CO<sub>2</sub> emissions, and reducing the need for landfills. The use of AFR in resource and energy-intensive industries is called co-processing, which is discussed in detail highlighting both advantages and disadvantages. Co-processing in cement kilns is a technology that is practiced globally on a large scale for environmentally sound and ecologically sustaining management of wastes from agricultural, industrial, and municipal sources. Considerable amount of scientific and technological advancements has been put in place while developing and implementing this technology at the cement plant operational scales. This technology is in practice for about 40 years or so and has been recommended by Basel Convention for the sustainable management of hazardous wastes and by the Stockholm Convention for the sustainable management of POPs. This technology has now been included in the waste management rules notified by the Ministry of the Government of India and has been provided as a preferred option for the management of wastes over the conventional options of incineration and landfill.

The book addresses how co-processing promotes mitigation of the climate change impacts and also conservation of the natural capital in addition to building a circular economy on a large scale. Even though this technology has received required attention and inclusion in the policy framework of many governments, its understanding and awareness with the stakeholders belonging to the academic and other relevant sections are vastly missing. The book will enhance the knowledge of co-processing technology among stakeholders involved in the implementation of the policy framework, design and engineering of the waste processing facilities to suit the co-processing operation, their operation and management, environmental consideration in implementing co-processing, operation and management of the cement plant, quality control, etc. In addition, the book will be useful for students and researchers working in this domain.

Maintaining the seed of God . . . His Word. Am I bleeding to death right in the house of God? Is my seed "stillborn" (no more Word in me)? Have I been seduced and allowed Satan to induce (take my seed) before God has finished with me? Am I "failing to thrive" and have not reached spiritual maturity yet? Am I a "careless carrier" of His Word (His seed in me). If any of these questions concern you, then it is God's will to forgive you and heal you. I want you to know that it is crucial to maintain His word . . . it is your bloodline to eternal life. Do not abort his word . . . Do not abort the ministry, assignment, nor your mandate. God has not been dethroned. Do not let human error, sin, frustrations, trials, or disappointments cause you to expel His seed before He has completed His work in you . . . Maintain his seed . . . His Word is your life. Joyce G. Cherry, B.Th., M.Div., D.Min., is the Founder and Senior Pastor of Greater Beulah Land International Fellowship in Conway, North Carolina. Dr. Cherry walks in the office of the apostle and functions in the gifts given to the body of Christ for edification.
