*Occupational Therapy for Children - E-Book* Springer Science & Business Media

Pediatric neuropsychology is the practice of understanding and elucidating brain-behavior relationships as applied to children and adolescents. This 2007 volume examines trends in the assessment and treatment of common disorders including traumatic brain injuries, brain tumors, epilepsy, and autistic spectrum disorders. Its primary aim is to help practitioners and researchers identify and understand the evidence to support interventions with a range of acquired or congenital neuropsychological disorders. The text is divided into three sections. Section one provides a foundation by considering general issues relevant to assessment and treatment in pediatric neuropsychology. Section two guides practitioners in their approach to the use of interventions in a range of conditions and disorders, and the book closes with a section focusing on medical and experimental initiatives with an emphasis on interdisciplinary issues. This book is essential reading for pediatric neuropsychologists, child clinical psychologists and school psychologists, as well as pediatric neurologists and psychiatrists.

Abstract: Purpose: The objective of this research was to evaluate whether children with below age-level visual perceptual skill who perform home-based visual perception therapy using the Perceptual Therapy System II: PTS II iNet (PTS II) would show improvements in performance on standardized tests of academic achievement, attention and memory and/or reported problem behaviors. Methods: Children 6 to 13 years of age with below age-level performance on a standardized test of visual perception (the Beery-Buktenica Developmental Test of Visual Motor Integration, 5th Edition [VMI], the Beery VMI supplemental test of Visual Perception [VP], or the Test of Visual Perceptual Skills, 3rd Edition [TVPS-3]) were invited to participate. Children with a score of 80 or below on the Kaufman Brief Intelligence Test, 2nd Edition (KBIT-2) were excluded. Children received the PTS II and were prescribed home therapy for 20 minutes a day, 5 days per week, for 16 weeks. Testing at baseline and outcome consisted of The Wechsler Individual Achievement Test - Second Edition (WIAT-2) Reading and Mathematics subtests (Word Reading, Reading Comprehension, Pseudodecoding, and Numerical Operations), the Cognitive Assessment System (CAS) Attention and Figure Memory subtests (Expressive Attention, Number Detection, Receptive Attention, and Figure Memory), and the Conners' Parental Rating Scales-Revised (S) (Conners'). One sample t-test analysis was used to compare baseline and outcome test scores to published normative values. Wilcoxon Signed-Rank test analysis determined if significant changes occurred between baseline and outcome test scores. Linear regression was performed to examine the effect of compliance. Results: Twenty-five children enrolled and twenty children (mean age 9.61 years) completed the study. At baseline, children scored on average significantly below the published normative means on CAS Expressive Attention and Number Detection ( $p = .003$  and  $.029$ , respectively), the composite CAS Attention standard score ( $p = .001$ ), and the WIAT-2 Word Reading, Pseudodecoding, and Numerical Operations subtests ( $p = .006$ ,  $.001$ , and  $.002$ , respectively). Baseline scores were significantly above the published normative mean on the Conners' Cognitive Problems/Inattention ( $p$  *Psychoeducational Assessment of Preschool Children* Elsevier Health Sciences Reinforcing best practice techniques, the second edition of this specialist guide for the assessment of learners with dyslexic-type difficulties includes: - a new chapter on The Implications of Co-existing Specific Learning Difficulties - updates to legislation including the SEND Code of Practice - updates to specific diagnostic tests - examples of interpreting test profiles - photocopiable resources available

Written by expert authors Kristina Breaux and Elizabeth Lichtenberger, *Essentials of KTEA-3 and WIAT-III Assessment* offers up-to-date, comprehensive, step-by-step instruction in the accurate and effective use of the newest editions of the Kaufman Test of Educational Achievement (KTEA-3) Comprehensive Form, KTEA-3 Brief Form, and the Wechsler Individual Achievement Test (WIAT-III). Designed to provide in-depth information in an easy to use reference format, the book provides guidelines and tips for administration, scoring, and interpretation that go beyond the information provided in the test manuals. A complete guide is included for digital administration and scoring using Q-interactive, automated scoring using Q-global, and hand scoring. *Essentials of KTEA-3 and WIAT-III Assessment* makes score interpretation easier by explaining what each score measures and the implications of a high or low score. Learn how to increase the diagnostic utility of the KTEA-3 and WIAT-III by taking full advantage of their capabilities for error analysis, qualitative observations, and progress monitoring, and by pairing the results with measures of cognitive ability such as the WISC-V and KABC-II. Clinicians will find a helpful discussion of how these tests may be interpreted using either a CHC or neuropsychological approach to assessment. Case studies illustrate the use of these tests to respond to various referral concerns. Annotations within each case report provide a window into the mind of the examiner throughout the assessment process. This book provides a depth and breadth of understanding that is appropriate for all assessment professionals, regardless of their level of training or experience. Extensive illustrations, call-out boxes, and "Test Yourself" questions help students and clinicians quickly absorb the information they need. *Essentials of KTEA-3 and WIAT-III Assessment* is the clear, focused guide to using these tests to their fullest potential.
