Shipboard maintenance is still an area of weakness for many companies, with repair costs featuring heavily on budgets. There is no point in creating an expensive, computer-based maintenance system if onboard equipment/machinery is poorly maintained. Ships staff must always observe manufacturers' instructions for maintenance. The Ship Repair and Maintenance Handbook looks at the practical side of repair and maintenance, rather than reliance on computer-based instruction, to assist onboard and shore-based personnel in minimising problems and expensive repairs. It also emphasises the importance of investment in education, spare parts and regular inspection by superintendents.

The Department of Defense is likely to face years of declining resources as the U.S. government grapples with fiscal challenges. These challenges affect every account, including those associated with surface ship maintenance and operations. At the same time, there has been widespread concern that surface ship materiel readiness is declining due to a high pace of operations and a sense that there have been many instances of deferred maintenance. The need to balance fiscal reality and a continued need for ready ships is likely to be an ongoing challenge. At the request of

the Assessment Division of the Office of the Chief of Naval Operations, this report: (1) determines the impact on long-term fleet readiness, Operational Availability (Ao), and Expected Service Life (ESL) caused by near-term reductions in Operations and Maintenance (O&M) accounts; (2) recommends potential strategies to minimize negative impacts to Ao and ESL and maintain the largest, most capable fleet possible; (3) develops a maintenance requirement concept, per ship class, that supports ESL, but allows for some risk within the maintenance strategy; and (4) defines the risks to Ao and ESL resulting from the new requirement. The methodology could be applicable to multiple ship classes.
