Pharmacophores and Pharmacophore Searches Springer Science & Business Media

This handbook is the first to address the practical aspects of this novel method. It provides a complete overview of the field and progresses from general considerations to real life scenarios in drug discovery research. Starting with an introductory historical overview, the authors move on to discuss ligand-based approaches, including 3D pharmacophores and 4D QSAR, as well as the concept and

application of pseudoreceptors. The next section on structure-based approaches includes pharmacophores from ligand-protein complexes, FLIP and 3D protein-ligand binding interactions. The whole is rounded off with a complete section devoted to applications and examples, including modeling of ADME properties. With its critical evaluation of pharmacophore-based strategies, this book represents a valuable aid for project leaders and decision-makers in the pharmaceutical industry, as well as pharmacologists, and medicinal and chemists.

Zeolite synthesis is an active field of research. As long as this continues, new phases will be discovered and new techniques for preparing existing phases will appear. This edition of *Verified Synthesis of Zeolitic Materials* contains all the recipes from the first edition plus 24 new recipes. Five new introductory articles have been included plus those from the first edition, some of which have been substantially revised. The XRD patterns have been recorded using different instrument settings from those in the first edition and are intended to conform to

typical X-ray diffraction practice. In most cases, only the XRD pattern for the product as synthesised is printed here. The exceptions are those phases which show marked changes in the XRD pattern upon calcination.

The World of Nano-Biomechanics, Second Edition, focuses on the remarkable

progress in the application of force spectroscopy to molecular and cellular biology that has occurred since the book's first edition in 2008. The initial excitement of seeing and touching a single molecule of protein/DNA is now culminating in the development of various ways to manipulate molecules and cells almost at our fingertips, enabling live cell operations. Topics include the development of molecular biosensors, mechanical diagnosis, cellular-level wound healing, and a look into the advances that have been made in our understanding of the significance of mechanical rigidity/flexibility of protein/DNA structure for the manifestation of biological activities. The book begins with a summary of the results of basic mechanics to help readers who are unfamiliar with engineering mechanics. Then, representative results obtained on biological macromolecules and structures, such as proteins, DNA, RNA, polysaccharides, lipid membranes, subcellular organelles, and live cells are discussed. New to this second edition are recent developments in three important applications, i.e., advanced AFM-data

analysis, high-resolution mechanical biosensing, and the use of cell mechanics for medical diagnosis. Explains the basic physical concepts and mathematics of elementary mechanics needed to understand and perform experimental work on small-scale biological samples Presents recent developments of force-based biosensing Includes novel applications of nano-biomechanics to the medical field

'Total Synthesis of Natural Products' is written and edited by some of today's leaders in organic chemistry. Eleven chapters cover a range of natural products, from steroids to alkaloids. Each chapter contains an introduction to the natural product in question, descriptions of its biological and pharmacological properties and outlines of total synthesis procedures already carried out. Particular emphasis is placed on novel methodologies developed by the respective authors and their research groups. This text is ideal for graduate and advanced undergraduate students, as well

as organic chemists in academia and industry.

Although size exclusion chromatography (SEC) is perhaps the most popular and widely used technique for determining the molecular weight distribution of polymeric materials, there have been very few texts written on this topic. During the past decade, SEC has experienced a considerable amount of growth in regard to column and detector technology and new applications. With these advances, SEC can now be used for determining absolute molecular weight, polymer chain conformation and size, and branching, as well as polymer solution properties. This book introduces the reader to the fundamentals of SEC with emphasis on practical aspects of the technique, such as column and mobile selection, calibration, new detector capabilities and guidelines for performing SEC on most types of polymers, especially those of industrial importance. This book is intended for either those new to the field of SEC, or for those research workers who require a more comprehensive background.

This 14th edition covers the 10-year period 1995 to 2004 with a primary focus on 2004. For the first time, only native National Fire Incident Reporting System (NFIRS) 5.0 data are used for NFIRS-based analyses. The report addresses the overall national fire problem. Detailed analyses of the residential and non-residential fire problem, firefighter casualties, and other subsets of the national fire problem are not included. These topic-specific analyses will be addressed as separate, stand-alone publications.

Chronicles of a Biker is a compilation of

anecdotes which Shaun Donovan wrote during his 12 years of riding (and racing) motor-cycles between 1975 and 1987. Now, in 2012, some 36 years after writing his first memoirs of a misspent youth, Shaun has encapsulated dozens of these truly memorable and remarkable (and in some cases unbelievable) stories into one book. In the first few chapters, read how Shaun survives an onslaught of terrifying crashes, each one leaving him with several broken bones -or huge chunks of flesh hanging from his battered body, as he lives-on to fight another day. Also included are the tales of his unlawful misdemeanours, as he is continually chased and caught by the police, culminating in several endorsements, along with the loss of his driving licence on no fewer than two occasions! The second-half of the book is dedicated to three amazing journeys which he undertook between July 1981 and August 1983. Spanning a distance of nearly 15,000km on the road (and a further 2,000 nautical miles on ferries), Shaun traverses 13 countries, 1 principality and several islands in Western Europe, before crossing continents into North Africa, to say his first

Hello to the countries of Morocco and Tunisia. Apart from crashing in Spain, dodging psychopathic drivers in Italy and having to put-up with various punctures and breakdowns, Shaun has a whale of a time with various friends and partners, as he crosses the Pyrenees Mountains, glides over the Austrian Alps, and blasts his way up and down the motorways of western Europe, discovering a handful of paradise beaches, dozens of quaint little villages - and several wonders of the world before his triple-adventure is finally at an end. Just like Shauns first two books, (*Battle of the Greyhounds, Part I - America, and Battle of the greyhounds, Part II Australia,*), which tell the stories of his epic journeys as he circumnavigates these vast continents by Greyhound Bus, Shaun writes every biking tale with such conviction and an unprecedented passion, that one could truly believe they were riding pillionpassenger with him from start to finish.

Combustion, Flames, and Explosions of Gases, Second Edition focuses on the processes, methodologies, and reactions involved in combustion phenomena. The publication first offers information on theoretical foundations, reaction between hydrogen and oxygen, and reaction between carbon monoxide and oxygen. Discussions focus on the fundamentals of reaction kinetics, elementary and complex reactions in gases, thermal reaction, and combined hydrogen-carbon monoxide-oxygen reaction. The text then elaborates on the reaction between hydrocarbons and

oxygen and combustion waves in laminar flow. The manuscript tackles combustion waves in turbulent flow and air entrainment and burning of jets of fuel gases. Topics include effect of turbulence spectrum and turbulent wrinkling on combustion wave propagation; ignition of high-velocity streams by hot solid bodies; burners with primary air entrainment; and description of jet flames. The book then takes a look at detonation waves in gases; emission spectra, ionization, and electric-field effects in flames; and methods of flame photography and pressure recording. The publication is a valuable reference for readers interested in combustion phenomena.
